Baile Átha Cliath.
7adh lá de mhí Eanáir, 1930.*

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 17.0 and 15.3; Dublin Registration Area, 16.1 and 15.3; Dublin County Borough 16.7 and 16.0; Cork 23.9 and 19.6; Limerick 25.1 and 14.2; and Waterford 11.7 and 12.2.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 1.2 per 1,000. Among the 36 deaths registered from all causes for Cork were 4 from measles, 2 from diphtheria, and 2 from diarrhoea and enteritis of children under 2 years of age.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 203—101 boys and 102 girls—and the deaths to 144—68 males and 76 females.

The deaths registered, omitting the deaths (numbering 13) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 16.1 per 1,000 of the population. The rate for all deaths registered in the Area was 17.7.

Included in the 131 deaths appertaining to the Area were one from scarlet-fever, one from whooping-cough, and 4 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from whooping-cough were 0, 5 and 0; and deaths from diarrhoea and enteritis of children under 2 years were 2, 2 and 0. There were no deaths from scarlet-fever in the three previous weeks.

One death from influenza was registered last week. There were 7 deaths from pneumonia (comprising 3 from broncho-pneumonia, 2 from lobar pneumonia, and 2 from pneumonia—not otherwise defined). Bronchitis caused 12 deaths.

Tuberculous disease caused 12 deaths (9 of which were from pulmonary tuberculosis, one from tuberculous peritonitis, and 2 from other forms of tuberculous disease), as against 8, 9 and 7 from all forms of tuberculosis in the three weeks preceding.

Ten deaths were caused by cancer, and 19 by diseases of the heart.

Four accidental deaths were registered, one of which was due to drowning and one to injuries caused by a motor-vehicle.

Among deaths of infants under one year of age, one was due to tuberculosis, 2 to meningitis, 2 to bronchitis, one to broncho-pneumonia, one to pneumonia, 3 to diarrhoea and enteritis, one to premature birth, one to injury at birth, one to congenital malformation, and 3 to congenital debility.

Twenty-two of the deaths registered during the week appertaining to the Area, were those of children under 5 years of age, 18 being infants under one year, of whom 6 were under one month old, and 34 deaths were those of persons aged 65 years and upwards, of whom 27 were 70 years of age or over.

Of the 131 deaths recorded, 64 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 4th January in 107 large English towns (including London, in which the rate was 13.9) was equal to an average annual death-rate of 13.4 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 17.2 per 1,000 persons living, the rate for Glasgow being 16.2, and for Edinburgh 13.9.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases

* Exclusive of 9 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough, including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District.

The births and deaths occurring in Institutions appertaining to localities situated outside the Eleven Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 14.4 and 15.7; Dublin Registration Area, 14.4 and 15.6; Dublin County Borough 13.3 and 16.2; Cork 17.3 and 19.3; Limerick 17.2 and 14.9; and Waterford 7.8 and 11.7.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 1.3 per 1,000. Among the 26 deaths registered from all causes for Cork were one from enteric fever, 4 from measles, 2 from diphtheria, and one from diarrhoea and enteritis of a child under 2 years of age; one of the 13 deaths for Limerick was from whooping-cough; and the 5 deaths for Sligo also included one from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 252—140 boys and 112 girls—and the deaths to 129—66 males and 63 females.

The deaths registered, omitting the deaths (numbering 12) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 14.4 per 1,000 of the population. During the two weeks ended with Saturday last the death rate averaged 15.3 and was 3.7 below the mean rate for the corresponding portions of the ten years 1920-29. The rate for all deaths registered during the two weeks was 16.8, and during the corresponding periods of the preceding ten years 20.5.

Included in the 117 deaths appertaining to the Area were one from diphtheria, and 4 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from diphtheria were one, 2 and 0; and deaths from diarrhoea and enteritis of children under 2 years were 2, 0 and 4.

There were 6 deaths from pneumonia (comprising 4 from broncho-pneumonia, and 2 from pneumonia—not otherwise defined). Bronchitis caused 16 deaths.

Tuberculous disease caused 15 deaths (11 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and 3 from other forms of tuberculous disease), as against 9, 7 and 12 from all forms of tuberculosis in the three weeks preceding.

Three deaths were caused by cancer, and 17 by diseases of the heart.

One accidental death, due to injuries caused by a motor-vehicle, was registered.

Among deaths of infants under one year of age, one was due to meningitis, one to broncho-pneumonia, 2 to diarrhoea and enteritis, 3 to premature birth, one to congenital malformation, and 5 to congenital debility.

Twenty of the deaths registered during the week appertaining to the Area, were those of children under 5 years of age, 15 being infants under one year, of whom 10 were under one month old, and 39 deaths were those of persons aged 65 years and upwards, of whom 27 were 70 years of age or over.

Of the 117 deaths recorded, 53 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 11th January in 107 large English towns (including London, in which the rate was 13.8) was equal to an average annual death-rate of 13.2 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 14.8 per 1,000 persons living, the rate for Glasgow being 16.0, and for Edinburgh 13.7.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 14th January, 1930, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 10 COUNTY BOROUGH or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGH: the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 6 patients in "Beneavin," the Convalescent Home of Cork Street Fever-Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough, including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District.

The births and deaths occurring in Institutions appertaining to localities situated outside the Eleven Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

Baile Átha Cliath,
21adh lá de mhí Eanáir, 1930.*

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 14.4 and 14.6; Dublin Registration Area, 13.1 and 14.4; Dublin County Borough 12.5 and 14.5; Cork 19.3 and 18.6; Limerick 17.2 and 15.9; and Waterford 25.4 and 12.7.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 1.0 per 1,000. Among the 29 deaths registered from all causes for Cork were one from whooping-cough, and one from diarrhoea and enteritis of a child under 2 years of age; one of the 13 deaths for Limerick was from whooping cough; and the 7 deaths for Galway included one from diphtheria.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 293—145 boys and 148 girls—and the deaths to 119—61 males and 58 females.

The deaths registered, omitting the deaths (numbering 13) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 13.1 per 1,000 of the population. During the three weeks ended with Saturday last the death rate averaged 14.5 and was 4.7 below the mean rate for the corresponding portions of the ten years 1920-29. The rate for all deaths registered during the three weeks was 16.0, and during the corresponding periods of the preceding ten years 20.8.

Included in the 106 deaths appertaining to the Area were 4 from whooping-cough, and 2 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from whooping-cough, were 0, one and 0; and deaths from diarrhoea and enteritis of children under 2 years were 0, 4 and 4.

One death from influenza was registered last week. There were 3 deaths from broncho-pneumonia, and one from pneumonia—not otherwise defined. Bronchitis caused 14 deaths.

Tuberculous disease caused 8 deaths (4 of which were from pulmonary tuberculosis, 3 from tuberculous meningitis, and one from tubercular abscess), as against 7, 12 and 15 from all forms of tuberculosis in the three weeks preceding.

Five deaths were caused by cancer, and 15 by diseases of the heart.

One death by suicide, was registered.

Among deaths of infants under one year of age, 3 were due to whooping-cough, one to tuberculosis, 2 to bronchitis, one to broncho-pneumonia, 2 to diarrhoea and enteritis, one to premature birth, one to congenital malformation, and 2 to congenital debility.

Twenty of the deaths registered during the week appertaining to the Area, were those of children under 5 years of age, 15 being infants under one year, of whom 4 were under one month old, and 4 deaths were those of persons aged 65 years and upwards, of whom 28 were 70 years of age or over.

Of the 106 deaths recorded, 38 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 18th January in 107 large English towns (including London, in which the rate was 12.9) was equal to an average annual death-rate of 12.7 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 15.5 per 1,000 persons living, the rate for Glasgow being 16.6, and for Edinburgh 15.5.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 18th January, 1930, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 10 COUNTY BOROUGH or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs : the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week ; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 2 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough, including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Eleven Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Eireann will be carried out in the Detailed Annual Report.

WEEK ENDED SATURDAY, 25TH JANUARY, 1930

[PRICE 1½d. NET

*Oifig um Chláruí Ghenearála,
Baile Átha Cliath,
28adh lá de mhí Eanáir, 1930.*

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 15.7 and 15.4; Dublin Registration Area, 14.6 and 14.6; Dublin County Borough 15.0 and 14.4; Cork 17.3 and 19.5; Limerick 19.8 and 19.8 and Waterford 23.5 and 17.1.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 0.8 per 1,000. Among the 26 deaths registered from all causes for Cork were one from measles, one from whooping-cough, and 2 from diphtheria; and the 4 deaths for Sligo included one from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 223—120 boys and 103 girls—and the deaths to 129—50 males and 79 females.

The deaths registered, omitting the deaths (numbering 10) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 14.6 per 1,000 of the population. During the four weeks ended with Saturday last the death rate averaged 14.6 and was 5.1 below the mean rate for the corresponding portions of the ten years 1920-29. The rate for all deaths registered during the four weeks was 16.0, and during the corresponding periods of the preceding ten years 21.5.

Included in the 119 deaths appertaining to the Area were one from diphtheria, and 2 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from diphtheria were 0, one and 0; and deaths from diarrhoea and enteritis of children under 2 years were 4, 4 and 2.

One death from influenza was registered last week. There were 9 deaths from pneumonia comprising 3 from broncho-pneumonia, 3 from lobar-pneumonia, and 3 from pneumonia—not otherwise defined. Bronchitis caused 19 deaths.

Tuberculous disease caused 14 deaths (11 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and one from miliary tuberculosis), as against 12, 15 and 8 from all forms of tuberculosis in the three weeks preceding.

Six deaths were caused by cancer, and 25 by diseases of the heart.

Two accidental deaths, one of which was due to injuries caused by a motor-vehicle, were registered.

Among deaths of infants under one year of age, 2 were due to bronchitis, 2 to broncho-pneumonia, 2 to diarrhoea and enteritis, and 4 to premature birth.

Fifteen of the deaths registered during the week appertaining to the Area, were those of children under 5 years of age, 10 being infants under one year, of whom 4 were under one month old, and 47 deaths were those of persons aged 65 years and upwards, of whom 32 were 70 years of age or over.

Of the 119 deaths recorded, 53 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 25th January in 107 large English towns (including London, in which the rate was 13.2) was equal to an average annual death-rate of 12.5 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 15.0 per 1,000 persons living, the rate for Glasgow being 15.2, and for Edinburgh 16.3.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhæal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 25th January, 1930, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 10 COUNTRY BOROUGH or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTRY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

[illegible]

(a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the Dublin Registration Area and its component parts the populations given are those estimated to the middle of 1930. For Belfast and Londonderry the populations shown are those according to the Census of 1926. The estimate shown for London relates to the civil population in 1928. The populations for Glasgow and Edinburgh are those estimated to the middle of 1930. (c) See note (i) at foot of first page. (d) Observations at Ordnance Survey Office, Phoenix Park. (e) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). (f) Botanic Gardens, Glasnevin. (g) Markree. (h) Including 4 deaths from cerebro-spinal meningitis.

TABLE II.—Showing for the week ended Saturday, 25th January, 1930, the number of Deaths of Residents of the several Registrars' Districts comprising the DUBLIN REGISTRATION AREA, and the COUNTY BOROUGH OF CORK,* the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 16.6 and 15.3 ; Dublin Registration Area, 16.3 and 14.6 ; Dublin County Borough 16.3 and 14.3 ; Cork 20.6 and 18.6 ; Limerick 14.5 and 17.2 and Waterford 17.6 and 18.6.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 0.6 per 1,000. Among the 31 deaths registered from all causes for Cork were 2 from measles, one from diphtheria, and 2 from diarrhoea and enteritis of children under 2 years of age.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 229—104 boys and 125 girls—and the deaths to 150—88 males and 62 females.

The deaths registered, omitting the deaths (numbering 17) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 16.3 per 1,000 of the population. During the five weeks ended with Saturday last the death rate averaged 14.9 and was 5.1 below the mean rate for the corresponding portions of the ten years 1920-29. The rate for all deaths registered during the five weeks was 16.5, and during the corresponding periods of the preceding ten years 21.8.

Included in the 133 deaths appertaining to the Area were 3 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from diarrhoea and enteritis of children under 2 years were 4, 2 and 2.

Two deaths from influenza were registered last week. There were 17 deaths from pneumonia, comprising 10 from broncho-pneumonia, one from lobar-pneumonia, and 6 from pneumonia—not otherwise defined. Bronchitis caused 16 deaths.

Tuberculous disease caused 11 deaths (9 of which were from pulmonary tuberculosis, one from tuberculous peritonitis, and one from miliary tuberculosis), as against 15, 8 and 14 from all forms of tuberculosis in the three weeks preceding.

Seven deaths were caused by cancer, and 18 by diseases of the heart.

Three accidental deaths, 2 of which were due to injuries caused by motor-vehicles, were registered.

Among deaths of infants under one year of age, one was due tuberculosis, one to convulsions, one to bronchitis, 3 to broncho-pneumonia, 2 to pneumonia, 3 to diarrhoea and enteritis, one to premature birth, one to injury at birth, and 4 to congenital debility.

Twenty-eight of the deaths registered during the week appertaining to the Area, were those of children under 5 years of age, 19 being infants under one year, of whom 5 were under one month old, and 44 deaths were those of persons aged 65 years and upwards, of whom 28 were 70 years of age or over.

Of the 133 deaths recorded, 62 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 1st February in 107 large English towns (including London, in which the rate was 12.6) was equal to an average annual death-rate of 12.3 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 15.4 per 1,000 persons living, the rate for Glasgow being 16.1, and for Edinburgh 15.9.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhæal diseases.

* Exclusive of 4 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough, including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Eleven Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 17.4 and 16.0; Dublin Registration Area, 17.5 and 15.4; Dublin County Borough 17.7 and 15.4; Cork 19.3 and 19.1; Limerick 18.5 and 17.5 and Waterford 19.6 and 21.5.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week were equal to an annual rate of 1.1 per 1,000. Among the 29 deaths registered from all causes for Cork were 2 from measles, and one from diphtheria. One of the 14 deaths for Limerick was from whooping-cough and one from diarrhoea and enteritis of a child under 2 years of age, and one of the 3 deaths for Drogheda was from diphtheria, and the one death registered for Sligo was from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 234—124 boys and 110 girls—and the deaths to 153—84 males and 69 females.

The deaths registered, omitting the deaths (numbering 10) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 17.5 per 1,000 of the population. During the six weeks ended with Saturday last the death rate averaged 15.3 and was 4.8 below the mean rate for the corresponding portions of the ten years 1920–29. The rate for all deaths registered during the six weeks was 16.9, and during the corresponding periods of the preceding ten years 21.8.

Included in the 143 deaths appertaining to the Area were 4 from diphtheria, and 3 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from diphtheria numbered 0, one and 0; and deaths from diarrhoea and enteritis of children under 2 years were 2, 2 and 3.

One death from influenza was registered last week. There were 12 deaths from pneumonia, comprising 5 from broncho-pneumonia, one from lobar-pneumonia, and 6 from pneumonia—not otherwise defined. Bronchitis caused 16 deaths.

Tuberculous disease caused 13 deaths (8 of which were from pulmonary tuberculosis, 3 from tuberculous meningitis, one from tuberculous peritonitis, and one from tuberculosis of the spine), as against 8, 14 and 11 from all forms of tuberculosis in the three weeks preceding.

Fifteen deaths were caused by cancer, and 19 by diseases of the heart.

Five accidental deaths were registered, one of which (that of a child aged 5 years) was due to burns, one to drowning, and 2 to motor buses.

Among deaths of infants under one year of age, 2 were due to meningitis, one to convulsions, 2 to bronchitis, 2 to broncho-pneumonia, 2 to pneumonia, 3 to diarrhoea and enteritis, 13 to premature birth, 2 to injury at birth, 2 to congenital malformation, and 2 to congenital debility.

Forty-three of the deaths registered during the week appertaining to the Area, were those of children under 5 years of age, 35 being infants under one year, of whom 19 were under one month old, and 37 deaths were those of persons aged 65 years and upwards, of whom 29 were 70 years of age or over.

Of the 143 deaths recorded, 65 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 8th February in 107 large English towns (including London, in which the rate was 12.4) was equal to an average annual death-rate of 17.7 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 16.1 per 1,000 persons living, the rate for Glasgow being 17.2, and for Edinburgh 17.0.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 8th February, 1930, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 10 COUNTY BOROUGH or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGH; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

(a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the Dublin Registration Area and its component parts the populations given are those estimated to the middle of 1930. For Belfast and Londonderry the populations shown are those according to the Census of 1926. The estimate shown for London relates to the civil population in 1928. The populations for Glasgow and Edinburgh are those estimated to the middle of 1930. (c) See note (f) at foot of first page. (d) Observations at Ordnance Survey Office, Phoenix Park. (e) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). (f) Botanic Gardens, Glasnevin. (g) Markree. (h) Including one death from cerebro-spinal meningitis.

TABLE II.—Showing for the week ended Saturday, 8th February, 1930, the number of Deaths of Residents of the several REGISTRARS' DISTRICTS comprising the DUBLIN REGISTRATION AREA, and the COUNTY BOROUGH OF CORK,* the annual Rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases†; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

* Exclusive of 2 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough, including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Eleven Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 20.1 and 17.5; Dublin Registration Area, 20.2 and 17.2; Dublin County Borough 21.1 and 17.5; Cork 25.2 and 20.6; Limerick 18.5 and 17.8 and Waterford 19.6 and 20.1.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week were equal to an annual rate of 1.5 per 1,000. Among the 38 deaths registered from all causes for Cork were 3 from diphtheria, and one from diarrhoea and enteritis of a child under 2 years of age, and one of the 10 deaths for Waterford was from scarlet fever.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 210—115 boys and 95 girls—and the deaths to 173—89 males and 84 females.

The deaths registered, omitting the deaths (numbering 8) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 20.2 per 1,000 of the population. During the seven weeks ended with Saturday last the death rate averaged 16.0 and was 4.2 below the mean rate for the corresponding portions of the ten years 1920–29. The rate for all deaths registered during the seven weeks was 17.5, and during the corresponding periods of the preceding ten years 22.0.

Included in the 165 deaths appertaining to the Area were 5 from whooping-cough, 2 from diphtheria, and 5 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from diphtheria numbered one, 0 and 4; and deaths from diarrhoea and enteritis of children under 2 years were 2, 3 and 3. There were no deaths from whooping-cough in the three previous weeks.

One death from influenza was registered last week. There were 21 deaths from pneumonia, comprising 11 from broncho-pneumonia, one from lobar-pneumonia, and 9 from pneumonia—not otherwise defined. Bronchitis caused 16 deaths.

Tuberculous disease caused 16 deaths (15 of which were from pulmonary tuberculosis, and one from tuberculous peritonitis), as against 14, 11 and 13 from all forms of tuberculosis in the three weeks preceding.

Nine deaths were caused by cancer, and 22 by diseases of the heart.

Two accidental deaths were registered, one of which (that of a child aged 2 years) was due to burns and one to injuries caused by a lorry.

Among deaths of infants under one year of age, 3 were due to whooping-cough, one to convulsions, 3 to bronchitis, 2 to broncho-pneumonia, one to pneumonia, 4 to diarrhoea and enteritis, one to premature birth, one to injury at birth, 2 to congenital malformation, and 9 to congenital debility.

Forty-two of the deaths registered during the week appertaining to the Area, were those of children under 5 years of age, 30 being infants under one year, of whom 7 were under one month old, and 52 deaths were those of persons aged 65 years and upwards, of whom 39 were 70 years of age or over.

Of the 165 deaths recorded, 77 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 15th February in 107 large English towns (including London) in which the rate was 14.1) was equal to an average annual death-rate of 13.7 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 17.3 per 1,000 persons living, the rate for Glasgow being 16.7 and for Edinburgh 18.8.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhæal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 15th February, 1930, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 10 COUNTY BOROUGH or URBAN DISTRICTS, and to BELFAS and LONDONDERRY COUNTY BOROUGHs; the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 7 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough, including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Eleven Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

[PRICE 1½d. NET.]

*Oifig um Chláirí Ghenearála,
Baile Átha Cliath,
25adh lá de mhí Feabhra, 1930.*

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 21.1 and 18.8; Dublin Registration Area, 22.0 and 19.0; Dublin County Borough, 22.9 and 19.5; Cork, 23.9 and 22.3; Limerick, 19.8 and 17.8; and Waterford, 19.6 and 19.1.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 1.6 per 1,000. Among the 36 deaths registered from all causes for Cork were one from measles, one from whooping-cough, 4 from diphtheria, and one from diarrhoea and enteritis of a child under 2 years of age; and one of the 15 deaths for Limerick was from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 322—162 boys and 160 girls—and the deaths to 205—102 males and 103 females.

The deaths registered, omitting the deaths (numbering 26) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 22.0 per 1,000 of the population. During the eight weeks ended with Saturday last the death rate averaged 16.8 and was 3.7 below the mean rate for the corresponding portions of the ten years 1920–29. The rate for all deaths registered during the eight weeks was 18.4, and during the corresponding periods of the preceding ten years 22.2.

Included in the 179 deaths appertaining to the Area were 7 from whooping-cough, 2 from diphtheria, and 2 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from whooping-cough were 0, 0, and 5; deaths from diphtheria numbered 0, 4 and 2; and deaths from diarrhoea and enteritis of children under 2 years were 3, 3 and 5.

Three deaths from influenza were registered last week. There were 20 deaths from pneumonia, comprising 12 from broncho-pneumonia, 3 from lobar-pneumonia, and 5 from pneumonia—not otherwise defined. Bronchitis caused 13 deaths.

Tuberculous disease caused 19 deaths (14 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and 4 from other forms of tuberculous disease), as against 11, 13 and 16 from all forms of tuberculosis in the three weeks preceding.

Fourteen deaths were caused by cancer, and 21 by diseases of the heart.

Two accidental deaths were registered, one of which was due to burns and one to injuries caused by a motor vehicle.

Among deaths of infants under one year of age, 2 were due to whooping-cough, one to meningitis, 2 to convulsions, 3 to bronchitis, 4 to broncho-pneumonia, one to lobar-pneumonia, 2 to pneumonia, one to diarrhoea and enteritis, 3 to premature birth, 2 to congenital malformation, and 6 to congenital debility.

Forty-five of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 29 being infants under one year, of whom 7 were under one month old, and 58 deaths were those of persons aged 65 years and upwards, of whom 44 were 70 years of age or over.

Of the 179 deaths recorded, 70 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 22nd February in 107 large English towns (including London, in which the rate was 14.2) was equal to an average annual death-rate of 14.3 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 18.2 per 1,000 persons living, the rate for Glasgow being 18.8 and for Edinburgh 22.3.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhæal diseases

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 22nd February, 1930, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 10 COUNTY BOROUGH or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGH; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 12 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough, including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Eleven Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

 Baile Átha Cliath,
 4adh lá de mhí Márta, 1930.*

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 21.7 and 20.1; Dublin Registration Area, 21.6 and 20.3; Dublin County Borough, 22.8 and 21.1; Cork, 28.6 and 24.3; Limerick, 22.5 and 19.8; and Waterford, 21.5 and 20.1.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 1.0 per 1,000. Among the 43 deaths registered from all causes for Cork were 4 from diphtheria.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 182—102 boys and 80 girls—and the deaths to 199—109 males and 90 females.

The deaths registered, omitting the deaths (numbering 23) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 21.6 per 1,000 of the population. During the nine weeks ended with Saturday last the death rate averaged 17.3, and was 3.2 below the mean rate for the corresponding portions of the ten years 1920–29. The rate for all deaths registered during the nine weeks was 19.1, and during the corresponding periods of the preceding ten years 22.1.

Included in the 176 deaths appertaining to the Area were one from enteric fever, 3 from whooping-cough, and 2 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from whooping-cough were 0, 5 and 7; and deaths from diarrhoea and enteritis of children under 2 years were 3, 5 and 2. There were no deaths from enteric fever in the three preceding weeks.

Four deaths from influenza were registered last week. There were 28 deaths from pneumonia, comprising 15 from broncho-pneumonia, 3 from lobar-pneumonia, and 10 from pneumonia—not otherwise defined. Bronchitis caused 19 deaths.

Tuberculous disease caused 14 deaths (11 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and 2 from other forms of tuberculous disease), as against 13, 16 and 19 from all forms of tuberculosis in the three weeks preceding.

Fifteen deaths were caused by cancer and 21 by diseases of the heart.

Five accidental deaths were registered, one of which was due to burns and 2 to injuries caused by motor vehicles.

Among deaths of infants under one year of age, one was due to whooping-cough, one to meningitis, one to convulsions, 2 to bronchitis, one to broncho-pneumonia, one to lobar-pneumonia, 3 to pneumonia, 2 to diarrhoea and enteritis, 5 to premature birth, one to congenital malformation, and 3 to congenital debility.

Thirty-nine of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 26 being infants under one year, of whom 8 were under one month old, and 56 deaths were those of persons aged 65 years and upwards, of whom 42 were 70 years of age or over.

Of the 176 deaths recorded, 67 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 1st March in 107 large English towns (including London, in which the rate was 14.5) was equal to an average annual death-rate of 15.2 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 18.3 per 1,000 persons living, the rate for Glasgow being 19.8 and for Edinburgh 17.2.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhæal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 1st March, 1930, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 10 COUNTY BOROUGH or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs: the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough, including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Eleven Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Eireann will be carried out in the Detailed Annual Report.

Baile Átha Cliath,
11adh lá de mhí Márta, 1930.*

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 21.5 and 21.1; Dublin Registration Area, 20.0 and 21.0; Dublin County Borough, 21.3 and 22.0; Cork, 35.9 and 28.4; Limerick, 13.2 and 18.5; and Waterford, 25.4 and 21.5.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 1.4 per 1,000. Among the 54 deaths registered from all causes for Cork were 3 from measles and 2 from diphtheria. Two of the 13 deaths for Waterford were from diarrhoea and enteritis of children under 2 years; 2 of the 7 deaths for Galway and one of the 2 deaths for Sligo were from whooping-cough; and included in the 5 deaths for Kilkenny were 2 from diarrhoea and enteritis of children under 2 years.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 232—115 boys and 117 girls—and the deaths to 184—84 males and 100 females.

The deaths registered, omitting the deaths (numbering 21) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 20.0 per 1,000 of the population. During the ten weeks ended with Saturday last the death rate averaged 17.6, and was 2.9 below the mean rate for the corresponding portions of the ten years 1920–29. The rate for all deaths registered during the ten weeks was 19.4, and during the corresponding periods of the preceding ten years 22.1.

Included in the 163 deaths appertaining to the Area were 3 from whooping-cough, 2 from diphtheria, and one from diarrhoea and enteritis of a child under 2 years. In the three preceding weeks deaths from whooping-cough were 5, 7 and 3; deaths from diphtheria were 2, 2 and 0; and deaths from diarrhoea and enteritis of children under 2 years were 5, 2 and 2.

Two deaths from influenza were registered last week. There were 21 deaths from pneumonia, comprising 17 from broncho-pneumonia, one from lobar-pneumonia, and 3 from pneumonia—not otherwise defined. Bronchitis caused 33 deaths.

Tuberculous disease caused 15 deaths (11 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and 2 from other forms of tuberculous disease), as against 16, 19 and 14 from all forms of tuberculosis in the three weeks preceding.

Eleven deaths were caused by cancer and 11 by diseases of the heart.

One accidental death (that of a child aged one year) was registered, being due to burns.

Among deaths of infants under one year of age, one was due to whooping-cough, 2 to tuberculous meningitis, one to meningitis, one to encephalitis, 4 to bronchitis, 11 to broncho-pneumonia, one to diarrhoea and enteritis, 4 to premature birth, 2 to congenital malformation, and 7 to congenital debility.

Forty-two of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 37 being infants under one year, of whom 10 were under one month old, and 58 deaths were those of persons aged 65 years and upwards, of whom 41 were 70 years of age or over.

Of the 163 deaths recorded, 80 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 8th March in 107 large English towns (including London, in which the rate was 14.1) was equal to an average annual death-rate of 14.8 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 19.5 per 1,000 persons living, the rate for Glasgow being 19.5 and for Edinburgh 19.6.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended **Saturday, 8th March, 1930**, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 10 COUNTY BOROUGH or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs: the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

*Oifig um Chláirí Ghenearála,
Baile Átha Cliath,
18adh lá de mhí Márta, 1930.*

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 17.4 and 20.4; Dublin Registration Area, 15.7 and 19.8; Dublin County Borough, 15.0 and 20.5; Cork, 21.3 and 27.4; Limerick, 29.1 and 21.2; and Waterford, 15.7 and 20.6.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 0.6 per 1,000. Among the 32 deaths registered from all causes for Cork was one from diphtheria; and of the 7 deaths registered for Sligo, one was from whooping-cough and one (a child under 2 years of age) from diarrhoea and enteritis.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 253—131 boys and 122 girls—and the deaths to 136—65 males and 71 females.

The deaths registered, omitting the deaths (numbering 8) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 15.7 per 1,000 of the population. During the eleven weeks ended with Saturday last the death rate averaged 17.4, and was 3.0 below the mean rate for the corresponding portions of the ten years 1920-29. The rate for all deaths registered during the eleven weeks was 19.2, and during the corresponding periods of the preceding ten years 22.1.

Included in the 128 deaths appertaining to the Area were 4 from whooping-cough and one from diphtheria. In the three preceding weeks deaths from whooping-cough were 7, 3 and 3; and deaths from diphtheria were 2, 0 and 2.

Two deaths from influenza were registered last week. There were 21 deaths from pneumonia, comprising 15 from broncho-pneumonia, one from lobar-pneumonia, and 5 from pneumonia—not otherwise defined. Bronchitis caused 13 deaths.

Tuberculous disease caused 16 deaths (12 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and 2 from other forms of tuberculous disease), as against 19, 14 and 15 from all forms of tuberculosis in the three weeks preceding.

Thirteen deaths were caused by cancer and 18 by diseases of the heart.

Among deaths of infants under one year of age, 2 were due to whooping-cough, one to diphtheria, one to meningitis, 2 to bronchitis, 5 to broncho-pneumonia, one to pneumonia, 3 to premature birth, 2 to congenital malformation, and 1 to congenital debility.

Thirty of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 18 being infants under one year, of whom 5 were under one month old, and 35 deaths were those of persons aged 65 years and upwards, of whom 25 were 70 years of age or over.

Of the 128 deaths recorded, 47 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 8th March in 107 large English towns (including London, in which the rate was 14.2) was equal to an average annual death-rate of 13.8 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 17.1 per 1,000 persons living, the rate for Glasgow being 18.2 and for Edinburgh 15.7.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended **Saturday, 15th March, 1930**, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 10 COUNTY BOROUGH or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs: the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 17 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough, including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Eleven Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 17.6 and 19.6; Dublin Registration Area, 18.0 and 18.8; Dublin County Borough, 19.5 and 19.7; Cork, 21.9 and 26.9; Limerick, 13.2 and 19.5; and Waterford, 7.8 and 17.6.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 1.0 per 1,000. Among the 33 deaths registered from all causes for Cork was one from measles; one from dysentery, and one (a child under 2 years of age) from diarrhoea and enteritis; and of the 7 deaths registered for Sligo, 2 were from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 214—133 boys and 81 girls—and the deaths to 159—77 males and 82 females.

The deaths registered, omitting the deaths (numbering 12) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 18.0 per 1,000 of the population. During the twelve weeks ended with Saturday last the death rate averaged 17.5, and was 3.0 below the mean rate for the corresponding portions of the ten years 1920-29. The rate for all deaths registered during the twelve weeks was 19.2, and during the corresponding periods of the preceding ten years 22.1.

Included in the 147 deaths appertaining to the Area were 2 from whooping-cough, 4 from diphtheria, and one (a child under 2 years of age) from diarrhoea and enteritis. In the three preceding weeks deaths from whooping-cough were 3, 3 and 4; deaths from diphtheria were 0, 2 and one, and deaths from diarrhoea and enteritis were 2, one, and 0.

Three deaths from influenza were registered last week. There were 17 deaths from pneumonia, comprising 12 from broncho-pneumonia, 2 from lobar-pneumonia, and 3 from pneumonia—not otherwise defined. Bronchitis caused 27 deaths.

Tuberculous disease caused 16 deaths (15 of which were from pulmonary tuberculosis, and one from tuberculous meningitis), as against 14, 15 and 16 from all forms of tuberculosis in the three weeks preceding.

Thirteen deaths were caused by cancer and 15 by diseases of the heart.

Among deaths of infants under one year of age, 2 were due to whooping-cough, one to diphtheria, one to convulsions, 3 to bronchitis, 5 to broncho-pneumonia, one to lobar-pneumonia, one to premature birth, 2 to congenital malformation, and 4 to congenital debility.

Thirty-one of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 22 being infants under one year, of whom 3 were under one month old, and 41 deaths were those of persons aged 65 years and upwards, of whom 27 were 70 years of age or over.

Of the 147 deaths recorded, 68 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 22nd March in 107 large English towns (including London, in which the rate was 13.5) was equal to an average annual death-rate of 13.8 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 16.7 per 1,000 persons living, the rate for Glasgow being 17.2 and for Edinburgh 17.1.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 11.—Showing for the week ended Saturday, 22nd March, 1920, the number of Deaths of Residents of the several Registration Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough, including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Eleven Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

Baile Átha Cliath
An Céad lá de mhí Aibreáin, 1930.*

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 23.1 and 19.9 ; Dublin Registration Area, 23.9 and 19.4 ; Dublin County Borough, 25.5 and 20.3 ; Cork, 19.3 and 24.6 ; Limerick, 19.8 and 18.8 ; and Waterford, 25.4 and 18.6.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 1.4 per 1,000. Among the 29 deaths registered from all causes for Cork were one from measles, 3 from diphtheria, and one (a child under 2 years of age) from diarrhoea and enteritis ; of the 15 deaths registered for Limerick, one was from whooping-cough and one from diphtheria, and one of the 15 deaths for Galway and one of the 4 for Sligo were from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 312—176 boys and 136 girls—and the deaths to 218—107 males and 111 females.

The deaths registered, omitting the deaths (numbering 23) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 23.9 per 1,000 of the population. During the thirteen weeks ended with Saturday last the death rate averaged 18.0, and was 2.3 below the mean rate for the corresponding portions of the ten years 1920-29. The rate for all deaths registered during the thirteen weeks was 19.8, and during the corresponding periods of the preceding ten years 22.0.

Included in the 195 deaths appertaining to the Area were 3 from whooping-cough, 3 from diphtheria, and 2 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from whooping-cough were 3, 4 and 2 ; deaths from diphtheria were 2, one and 4, and deaths from diarrhoea and enteritis were one, 0, and one.

Three deaths from influenza were registered last week. There were 32 deaths from pneumonia, comprising 18 from broncho-pneumonia, 3 from lobar-pneumonia, and 11 from pneumonia—not otherwise defined. Bronchitis caused 19 deaths.

Tuberculous disease caused 22 deaths (21 of which were from pulmonary tuberculosis, and one from tuberculosis of lymphatic system), as against 15, 16 and 16 from all forms of tuberculosis in the three weeks preceding.

Fifteen deaths were caused by cancer and 20 by diseases of the heart.

Four accidental deaths were registered, two of which were due to burns, and one to injuries caused by a motor-vehicle. There was also one death by suicide.

Among deaths of infants under one year of age, 2 were due to whooping-cough, one to tuberculosis, one to meningitis, one to convulsions, 2 to bronchitis, 9 to broncho-pneumonia, 2 to lobar-pneumonia, 3 to pneumonia, 2 to diarrhoea and enteritis, 13 to premature birth, 2 to injury at birth, one to congenital malformation, and 5 to congenital debility.

Sixty of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 46 being infants under one year, of whom 21 were under one month old, and 57 deaths were those of persons aged 65 years and upwards, of whom 45 were 70 years of age or over.

Of the 195 deaths recorded, 89 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 29th March in 107 large English towns (including London, in which the rate was 13.8) was equal to an average annual death-rate of 14.3 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 17.3 per 1,000 persons living, the rate for Glasgow being 18.8 and for Edinburgh 13.5.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 29th March, 1930, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 10 COUNTY BOROUGH or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs: the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 20.3 and 19.6; Dublin Registration Area, 19.1 and 19.2; Dublin County Borough, 19.5 and 19.9; Cork, 22.6 and 21.3; Limerick, 30.4 and 23.1; and Waterford, 21.5 and 17.6.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 0.9 per 1,000. Among the 34 deaths registered from all causes for Cork were one from measles, one from scarlet-fever, 3 from diphtheria, and one (a child under 2 years of age) from diarrhoea and enteritis.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 205—93 boys and 112 girls—and the deaths to 170—89 males and 81 females.

The deaths registered, omitting the deaths (numbering 14) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 19.1 per 1,000 of the population. During the fourteen weeks ended with Saturday last the death rate averaged 18.0, and was 2.3 below the mean rate for the corresponding portions of the ten years 1920–29. The rate for all deaths registered during the fourteen weeks was 19.9, and during the corresponding periods of the preceding ten years 22.0.

Included in the 156 deaths appertaining to the Area were one from scarlet fever, one from whooping-cough, and 2 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from whooping-cough were 4, 2 and 3; and deaths from diarrhoea and enteritis of children under 2 years were 0, one and 2. There were no deaths from scarlet fever in the three previous weeks.

One death from influenza was registered last week. There were 20 deaths from pneumonia, comprising 8 from broncho-pneumonia, 2 from lobar-pneumonia, and 10 from pneumonia—not otherwise defined. Bronchitis caused 17 deaths.

Tuberculous disease caused 28 deaths (25 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and 2 from other forms of tuberculous disease), as against 16, 16 and 22 from all forms of tuberculosis in the three weeks preceding.

Five deaths were caused by cancer and 13 by diseases of the heart.

Eight accidental deaths were registered, one of which was due to drowning, and 2 to injuries caused by motor-vehicles. There was also one death by suicide.

Among deaths of infants under one year of age, one was due to whooping-cough, one to convulsions, 2 to bronchitis, 3 to broncho-pneumonia, 2 to lobar-pneumonia, 3 to pneumonia, one to diarrhoea and enteritis, one to premature birth, one to congenital malformation, and 3 to congenital debility.

Thirty-four of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 20 being infants under one year, of whom 4 were under one month old, and 42 deaths were those of persons aged 65 years and upwards, of whom 31 were 70 years of age or over.

Of the 156 deaths recorded, 67 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 5th April in 107 large English towns (including London, in which the rate was 12.6) was equal to an average annual death-rate of 12.9 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 16.5 per 1,000 persons living, the rate for Glasgow being 16.9 and for Edinburgh 16.1.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 5th April, 1930, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 10 COUNTY BOROUGH or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROWHS; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 16.4 and 19.4; Dublin Registration Area, 15.1 and 19.0; Dublin County Borough, 16.1 and 20.2; Cork, 19.3 and 20.8; Limerick, 15.9 and 19.8; and Waterford, 19.6 and 18.6.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 1.1 per 1,000. Among the 29 deaths registered from all causes for Cork were one from measles, one from diphtheria, and one (a child under 2 years of age) from diarrhoea and enteritis; one of the 12 deaths for Limerick was from enteric-fever, and the one death for Sligo was from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 241—117 boys and 124 girls—and the deaths to 134—70 males and 64 females.

The deaths registered, omitting the deaths (numbering 11) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 15.1 per 1,000 of the population. During the fifteen weeks ended with Saturday last the death rate averaged 17.8, and was 2.4 below the mean rate for the corresponding portions of the ten years 1920–29. The rate for all deaths registered during the fifteen weeks was 19.6, and during the corresponding periods of the preceding ten years 21.9.

Included in the 123 deaths appertaining to the Area were 3 from whooping-cough, 2 from diphtheria, and 3 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from whooping-cough were 2, 3 and one; deaths from diphtheria were 4, 3 and 0; and deaths from diarrhoea and enteritis of children under 2 years were one, 2 and 2.

There were 15 deaths from pneumonia, comprising 10 from broncho-pneumonia, one from lobar-pneumonia, and 4 from pneumonia—not otherwise defined. Bronchitis caused 17 deaths.

Tuberculous disease caused 18 deaths (all of which were from pulmonary tuberculosis), as against 16, 22 and 28 from all forms of tuberculosis in the three weeks preceding.

Eight deaths were caused by cancer and 16 by diseases of the heart.

Three accidental deaths were registered, one of which was due to injuries caused by a motor-vehicle.

Among deaths of infants under one year of age, 2 were due to whooping-cough, 6 to bronchitis, 4 to broncho-pneumonia, one to pneumonia, 3 to diarrhoea and enteritis, 4 to premature birth, 3 to congenital malformation, and 4 to congenital debility.

Thirty-eight of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 29 being infants under one year, of whom 8 were under one month old, and 29 deaths were those of persons aged 65 years and upwards, of whom 23 were 70 years of age or over.

Of the 123 deaths recorded, 51 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 12th April in 107 large English towns (including London, in which the rate was 12.3) was equal to an average annual death-rate of 12.4 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 16.3 per 1,000 persons living, the rate for Glasgow being 16.1 and for Edinburgh 16.6.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough, including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Eleven Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

Baile Átha Cliath,
23adh lá de mhí Aibreáin, 1930.*

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 15.3 and 18.8; Dublin Registration Area, 14.5 and 18.2; Dublin County Borough, 15.3 and 19.1; Cork, 14.6 and 19.0; Limerick, 26.4 and 23.1; and Waterford, 21.5 and 22.0.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 1.2 per 1,000. Among the 22 deaths registered from all causes for Cork were 3 from diphtheria; and one of the 20 deaths for Limerick, and 2 of the 4 for Sligo were from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 268—140 boys and 128 girls—and the deaths to 140—71 males and 69 females.

The deaths registered, omitting the deaths (numbering 22) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 14.5 per 1,000 of the population. During the sixteen weeks ended with Saturday last the death rate averaged 17.6, and was 2.5 below the mean rate for the corresponding portions of the ten years 1920–29. The rate for all deaths registered during the sixteen weeks was 19.5, and during the corresponding periods of the preceding ten years 21.8.

Included in the 118 deaths appertaining to the Area were 3 from whooping-cough, 4 from diphtheria, and one from diarrhoea and enteritis of a child under 2 years. In the three preceding weeks deaths from whooping-cough were 3, one and 3; deaths from diphtheria were 3, 0 and 2; and deaths from diarrhoea and enteritis of children under 2 years were 2, 2 and 3.

There were 16 deaths from pneumonia, comprising 9 from broncho-pneumonia, 2 from lobar-pneumonia, and 5 from pneumonia—not otherwise defined. Bronchitis caused 8 deaths.

Tuberculous disease caused 17 deaths (13 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and 2 from other forms of tuberculous disease) as against 22, 28 and 18 from all forms of tuberculosis in the three weeks preceding.

Seven deaths were caused by cancer and 18 by diseases of the heart.

One accidental death, due to injuries caused by a motor-vehicle, was registered.

Among deaths of infants under one year of age, one was due to meningitis, one to convulsions, one to bronchitis, 4 to broncho-pneumonia, 2 to pneumonia, 3 to premature birth, and 5 to congenital debility.

Twenty-eight of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 18 being infants under one year, of whom 6 were under one month old, and 34 deaths were those of persons aged 65 years and upwards, of whom 24 were 70 years of age or over.

Of the 118 deaths recorded, 47 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 19th April in 107 large English towns (including London, in which the rate was 11.5) was equal to an average annual death-rate of 11.8 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 15.2 per 1,000 persons living, the rate for Glasgow being 17.2 and for Edinburgh 15.0.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 19th April, 1930, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 10 COUNTY BOROUGH or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs : the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week ; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 15.1 and 16.8; Dublin Registration Area, 14.2 and 15.7; Dublin County Borough, 14.0 and 16.2; Cork, 19.9 and 19.1; Limerick, 19.8 and 23.1; and Waterford, 15.7 and 19.6.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 0.8 per 1,000. Among the 30 deaths registered from all causes for Cork was one from diphtheria; and one of the 4 deaths for Galway and one of the 4 for Sligo were from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 257—144 boys and 113 girls—and the deaths to 133—67 males and 66 females.

The deaths registered, omitting the deaths (numbering 17) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 14.2 per 1,000 of the population. During the seventeen weeks ended with Saturday last the death rate averaged 17.4, and was 2.6 below the mean rate for the corresponding portions of the ten years 1920–29. The rate for all deaths registered during the seventeen weeks was 19.3, and during the corresponding periods of the preceding ten years 21.7.

Included in the 116 deaths appertaining to the Area were 2 from whooping-cough, one from diphtheria, and 4 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from whooping-cough were one, 3 and 3; deaths from diphtheria were 0, 2 and 4; and deaths from diarrhoea and enteritis of children under 2 years were 2, 3 and one.

Two deaths from influenza were registered last week; there were 8 deaths from pneumonia, comprising 3 from broncho-pneumonia, one from lobar-pneumonia, and 4 from pneumonia—not otherwise defined. Bronchitis caused 6 deaths.

Tuberculous disease caused 14 deaths (13 of which were from pulmonary tuberculosis, and one from general tuberculosis as against 28, 18 and 17 from all forms of tuberculosis in the three weeks preceding.

Thirteen deaths were caused by cancer, and 12 by diseases of the heart.

Among deaths of infants under one year of age, one was due to whooping-cough, 2 to broncho-pneumonia, one to pneumonia, 4 to diarrhoea and enteritis, 5 to premature birth, one to injury at birth, one to congenital malformation, and one to congenital debility.

Twenty-one of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 17 being infants under one year, of whom 11 were under one month old, and 39 deaths were those of persons aged 65 years and upwards, of whom 21 were 70 years of age or over.

Of the 116 deaths recorded, 50 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 26th April in 107 large English towns (including London, in which the rate was 12.7) was equal to an average annual death-rate of 12.4 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 15.3 per 1,000 persons living, the rate for Glasgow being 16.2 and for Edinburgh 12.8.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

(a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the Dublin Registration Area and its component parts the populations given are those estimated to the middle of 1930. For Belfast and Londonderry the populations shown are those according to the Census of 1926. The estimate shown for London relates to the civil population in 1928. The populations for Glasgow and Edinburgh are those estimated to the middle of 1930. (c) See note (†) at foot of first page. (d) Observations at Ordnance Survey Office, Phoenix Park. (e) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). (f) Botanic Gardens, Glasnevin. (g) Markree. (h) Including 3 deaths from cerebro-spinal meningitis.

* Exclusive of 17 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough, including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Eleven Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 16.2 and 15.8; Dublin Registration Area, 16.1 and 15.0; Dublin County Borough, 16.3 and 15.4; Cork, 16.6 and 17.6; Limerick, 18.5 and 20.2; and Waterford, 17.6 and 18.6.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 0.8 per 1,000. Among the 25 deaths registered from all causes for Cork, were one from whooping-cough, 2 from diphtheria, and one from diarrhoea and enteritis of a child under 2 years; and one of the 14 deaths for Limerick was from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 244—134 boys and 110 girls—and the deaths to 142—74 males and 68 females.

The deaths registered, omitting the deaths (numbering 11) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 16.1 per 1,000 of the population. During the eighteen weeks ended with Saturday last the death rate averaged 17.4, and was 2.4 below the mean rate for the corresponding portions of the ten years 1920–29. The rate for all deaths registered during the eighteen weeks was 19.2, and during the corresponding periods of the preceding ten years 21.6.

Included in the 131 deaths appertaining to the Area were one from whooping-cough, one from diphtheria, and 3 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from whooping-cough were 3, 3 and 2; deaths from diphtheria were 2, 4 and one; and deaths from diarrhoea and enteritis of children under 2 years were 3, one and 4.

There were 10 deaths from pneumonia, comprising 4 from broncho-pneumonia, 2 from lobar-pneumonia, and 4 from pneumonia—not otherwise defined. Bronchitis caused 18 deaths.

Tuberculous disease caused 8 deaths (6 of which were from pulmonary tuberculosis, and 2 from other forms of tuberculous disease), as against 18, 17 and 14, from all forms of tuberculosis in the three weeks preceding.

Eleven deaths were caused by cancer, and 16 by diseases of the heart.

Five accidental deaths were registered, one of which (that of a child aged 2 years 5 months) was due to scalds, and 2 to injuries caused by motor-vehicles. There was also one death by suicide.

Among deaths of infants under one year of age, one was due to meningitis, 3 to convulsions, 3 to bronchitis, one to broncho-pneumonia, one to lobar-pneumonia, 2 to pneumonia, 3 to diarrhoea and enteritis, 2 to premature birth, 3 to congenital debility, and one to overlying.

Thirty-four of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 23 being infants under one year, of whom 10 were under one month old, and 46 deaths were those of persons aged 65 years and upwards, of whom 28 were 70 years of age or over.

Of the 131 deaths recorded, 65 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 3rd May in 107 large English towns (including London, in which the rate was 12.0) was equal to an average annual death-rate of 12.1 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 14.4 per 1,000 persons living, the rate for Glasgow being 14.8 and for Edinburgh 13.1.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 3rd May, 1930, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 10 COUNTY BOROUGH or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology, for London, Edinburgh, and Glasgow.

* Exclusive of 11 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough, including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Eleven Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Eireann will be carried out in the Detailed Annual Report.

Baile Átha Cliath,
13adh lá de mhí Bealtaine, 1930.*

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 18.6 and 16.3; Dublin Registration Area, 16.4 and 15.3; Dublin County Borough, 15.9 and 15.4; Cork, 26.6 and 19.4; Limerick, 25.1 and 22.5; and Waterford, 21.5 and 19.1.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 1.0 per 1,000. Among the 40 deaths registered from all causes for Cork, were 3 from diphtheria; one of 19 deaths for Limerick was from enteric fever; 2 of the 7 deaths for Dundalk were from diarrhoea and enteritis of children under 2 years; and the 3 deaths for Drogheda included one from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 214—110 boys and 104 girls—and the deaths to 147—74 males and 73 females.

The deaths registered, omitting the deaths (numbering 13) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 16.4 per 1,000 of the population. During the nineteen weeks ended with Saturday last the death rate averaged 17.3, and was 2.3 below the mean rate for the corresponding portions of the ten years 1920–29. The rate for all deaths registered during the nineteen weeks was 19.1, and during the corresponding periods of the preceding ten years 21.4.

Included in the 134 deaths appertaining to the Area were one from whooping-cough, one from diphtheria, and 3 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from whooping-cough were 3, 2 and one; deaths from diphtheria were 4, one and one; and deaths from diarrhoea and enteritis of children under 2 years were one, 4 and 3.

There were 12 deaths from pneumonia, comprising 6 from broncho-pneumonia, and 6 from pneumonia—not otherwise defined. Bronchitis caused 16 deaths.

Tuberculous disease caused 14 deaths (12 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and one from tuberculous peritonitis), as against 17, 14 and 8, from all forms of tuberculosis in the three weeks preceding.

Twelve deaths were caused by cancer, and 18 by diseases of the heart.

Two accidental deaths were registered, one of which was due to injuries caused by a bicycle.

Among deaths of infants under one year of age, one was due to convulsions, one to bronchitis, one to broncho-pneumonia, 2 to pneumonia, 2 to diarrhoea and enteritis, 5 to premature birth, one to congenital malformation, and 2 to congenital debility.

Thirty of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 19 being infants under one year, of whom 11 were under one month old, and 47 deaths were those of persons aged 65 years and upwards, of whom 36 were 70 years of age or over.

Of the 134 deaths recorded, 61 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 10th May in 107 large English towns (including London, in which the rate was 10.8) was equal to an average annual death-rate of 11.4 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 15.4 per 1,000 persons living, the rate for Glasgow being 15.3 and for Edinburgh 16.3.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 10th May, 1930, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 10 COUNTRY BOROUGH or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs: the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 10 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough, including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Eleven Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Eireann will be carried out in the Detailed Annual Report.

WEEK ENDED SATURDAY, 17TH MAY, 1930.

[PRICE 1½d. NET.]

*Oifig um Chláirí Ghinearálta,
Baile Átha Cliath,
20adh lá de mhí Bealtaine, 1930.*

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 17.1 and 16.8; Dublin Registration Area, 17.5 and 16.1; Dublin County Borough, 18.0 and 16.1; Cork, 14.6 and 19.4; Limerick, 14.5 and 19.5; and Waterford, 13.7 and 17.1.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 1.0 per 1,000. Among the 22 deaths registered from all causes for Cork, were 2 from diphtheria, and one from diarrhoea and enteritis of a child under 2 years; and the 6 deaths for Drogheda included one from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 233—122 boys and 111 girls—and the deaths to 167—92 males and 75 females.

The deaths registered, omitting the deaths (numbering 24) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 17.5 per 1,000 of the population. During the twenty weeks ended with Saturday last the death rate averaged 17.3, and was 2.1 below the mean rate for the corresponding portions of the ten years 1920–29. The rate for all deaths registered during the twenty weeks was 19.2, and during the corresponding periods of the preceding ten years 21.2.

Included in the 143 deaths appertaining to the Area were one from whooping-cough, 2 from diphtheria, and 4 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from whooping-cough were 2, one and one; deaths from diphtheria were one, one and one; and deaths from diarrhoea and enteritis of children under 2 years were 4, 3 and 3.

Two deaths from influenza were registered last week. There were 10 deaths from pneumonia, comprising 4 from broncho-pneumonia, 2 from lobar pneumonia, and 4 from pneumonia—not otherwise defined. Bronchitis caused 14 deaths.

Tuberculous disease caused 15 deaths (11 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and 2 from tuberculous peritonitis), as against 14, 8 and 14, from all forms of tuberculosis in the three weeks preceding.

Nineteen deaths were caused by cancer, and 15 by diseases of the heart.

Two accidental deaths were registered, one of which (that of a child aged 1 year, 10 months) was due to scalds.

Among deaths of infants under one year of age, one was due to whooping-cough, one to convulsions, one to bronchitis, one to broncho-pneumonia, 2 to pneumonia, 3 to diarrhoea and enteritis, 9 to premature birth, 3 to congenital malformation, and 3 to congenital debility.

Forty of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 31 being infants under one year, of whom 15 were under one month old, and 32 deaths were those of persons aged 65 years and upwards, of whom 25 were 70 years of age or over.

Of the 143 deaths recorded, 68 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 17th May in 107 large English towns (including London, in which the rate was 11.0) was equal to an average annual death-rate of 11.6 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 14.2 per 1,000 persons living, the rate for Glasgow being 14.4 and for Edinburgh 12.8.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 17th May, 1930, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 10 COUNTY BOROUGH or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs: the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 10 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough, including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Eleven Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Eireann will be carried out in the Detailed Annual Report.

Baile Átha Cliath,
27adh lá de mhí Bealtaine, 1930.*

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 13.6 and 16.4; Dublin Registration Area, 14.4 and 16.1; Dublin County Borough, 16.1 and 16.6; Cork, 16.6 and 18.6; Limerick, 11.9 and 17.5; and Waterford, 5.9 and 14.7.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 0.8 per 1,000. Among the 25 deaths registered from all causes for Cork, were one from measles, one from scarlet fever, and 2 from diphtheria.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 210—101 boys and 109 girls—and the deaths to 129—68 males and 61 females.

The deaths registered, omitting the deaths (numbering 12) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 14.4 per 1,000 of the population. During the twenty-one weeks ended with Saturday last the death rate averaged 17.2, and was 2.1 below the mean rate for the corresponding portions of the ten years 1920–29. The rate for all deaths registered during the twenty-one weeks was 19.0, and during the corresponding periods of the preceding ten years 21.0.

Included in the 117 deaths appertaining to the Area were 3 from diphtheria, and 3 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from diphtheria were one, one and 2; and deaths from diarrhoea and enteritis of children under 2 years were 3, 3 and 4.

There were 9 deaths from pneumonia, comprising 6 from broncho-pneumonia, one from lobar pneumonia, and 2 from pneumonia—not otherwise defined. Bronchitis caused 14 deaths.

Tuberculous disease caused 18 deaths (9 of which were from pulmonary tuberculosis, 6 from tuberculous meningitis, one from tuberculous peritonitis, and 2 from other forms of tuberculous disease), as against 8, 14 and 15, from all forms of tuberculosis in the three weeks preceding.

Ten deaths were caused by cancer, and 15 by diseases of the heart.

Among deaths of infants under one year of age, 2 were due to tuberculous meningitis, one to convulsions, one to pneumonia, 3 to diarrhoea and enteritis, 6 to premature birth, and one to congenital debility.

Twenty-nine of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 20 being infants under one year, of whom 10 were under one month old, and 32 deaths were those of persons aged 65 years and upwards, of whom 21 were 70 years of age or over.

Of the 117 deaths recorded, 49 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 24th May in 107 large English towns (including London, in which the rate was 10.1) was equal to an average annual death-rate of 11.1 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 12.9 per 1,000 persons living, the rate for Glasgow being 13.2 and for Edinburgh 12.9.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 24th May, 1930, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 10 COUNTY BOROUGH or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGH: the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 15.2 and 16.1; Dublin Registration Area, 15.5 and 16.0; Dublin County Borough, 16.4 and 16.6; Cork, 15.9 and 18.4; Limerick, 10.6 and 15.5; and Waterford, 17.6 and 14.7.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 0.6 per 1,000. Among the 24 deaths registered from all causes for Cork, were 3 from diphtheria, and the 8 deaths for Galway included one from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 250—127 boys and 123 girls—and the deaths to 142—66 males and 76 females.

The deaths registered, omitting the deaths (numbering 16) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 15.5 per 1,000 of the population. During the twenty-two weeks ended with Saturday last the death rate averaged 17.1, and was 1.9 below the mean rate for the corresponding portions of the ten years 1920–29. The rate for all deaths registered during the twenty-two weeks was 19.0, and during the corresponding periods of the preceding ten years 20.8.

Included in the 126 deaths appertaining to the Area were one from diphtheria, and 3 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from diphtheria were one, 2 and 3; and deaths from diarrhoea and enteritis of children under 2 years were 3, 4 and 3.

There were 12 deaths from pneumonia, comprising 9 from broncho-pneumonia, and 3 from lobar pneumonia. Bronchitis caused 8 deaths.

Tuberculous disease caused 16 deaths (12 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, one from tuberculous peritonitis, and one from general tuberculosis), as against 14, 15 and 18, from all forms of tuberculosis in the three weeks preceding.

Fourteen deaths were caused by cancer, and 19 by diseases of the heart.

Three accidental deaths were registered, one of which was due to drowning, and 2 to injuries caused by motor vehicles.

Among deaths of infants under one year of age, one was due to tuberculous meningitis, one to general tuberculosis, 3 to broncho-pneumonia, 3 to diarrhoea and enteritis, 2 to premature birth, one to congenital malformation, and 2 to congenital debility.

Twenty-two of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 16 being infants under one year, of whom 5 were under one month old, and 44 deaths were those of persons aged 65 years and upwards, of whom 37 were 70 years of age or over.

Of the 126 deaths recorded, 50 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 31st May in 107 large English towns (including London, in which the rate was 9.8) was equal to an average annual death-rate of 10.6 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 13.2 per 1,000 persons living, the rate for Glasgow being 13.1 and for Edinburgh 14.4.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 31st May, 1930, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 10 COUNTY BOROUGH or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 8 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough, including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Eleven Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

No. 23. VOL. LXVII.]

WEEK ENDED SATURDAY, 7TH JUNE, 1930.

[PRICE 1½d. NET.]

*Oifig um Chláirú Ghenearála,
Baile Átha Cliath,
11adh lá de mhí Meitheamh, 1930.*

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 12.3 and 14.6; Dublin Registration Area, 12.5 and 15.0; Dublin County Borough, 11.9 and 15.6; Cork, 15.3 and 15.6; Limerick, 13.2 and 12.6; and Waterford, 9.8 and 11.8.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 0.6 per 1,000. Among the 23 deaths registered from all causes for Cork, was one from scarlet fever; one of the 10 deaths for Limerick was from whooping-cough; the 3 for Galway included one from diphtheria; and the one death registered for Kilkenny was from measles.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 248—120 boys and 128 girls—and the deaths to 123—61 males and 62 females.

The deaths registered, omitting the deaths (numbering 21) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 12.5 per 1,000 of the population. During the twenty-three weeks ended with Saturday last the death rate averaged 16.9, and was 1.9 below the mean rate for the corresponding portions of the ten years 1920–29. The rate for all deaths registered during the twenty-three weeks was 18.8, and during the corresponding periods of the preceding ten years 20.6.

Included in the 102 deaths appertaining to the Area were one from measles, and 2 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from diarrhoea and enteritis of children under 2 years were 3, 4 and 3. There were no deaths from measles in the three previous weeks.

There were 7 deaths from pneumonia, comprising 3 from broncho-pneumonia, and 4 from lobar pneumonia. Bronchitis caused 9 deaths.

Tuberculous disease caused 16 deaths (11 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, one from tuberculous peritonitis, and 2 from general tuberculosis), as against 15, 18 and 16, from all forms of tuberculosis in the three weeks preceding.

Seven deaths were caused by cancer and 13 by diseases of the heart.

Five accidental deaths were registered, one of which was due to drowning, and 3 to injuries caused by motor vehicles.

Among deaths of infants under one year of age, one was due to meningitis, 2 to bronchitis, one to pneumonia, 2 to diarrhoea and enteritis, one to premature birth, 2 to congenital malformation, and 2 to congenital debility.

Twenty-three of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 14 being infants under one year, of whom 7 were under one month old, and 26 deaths were those of persons aged 65 years and upwards, of whom 21 were 70 years of age or over.

Of the 102 deaths recorded, 49 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 7th June in 107 large English towns (including London, in which the rate was 10.0) was equal to an average annual death-rate of 10.8 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 13.7 per 1,000 persons living, the rate for Glasgow being 13.2 and for Edinburgh 16.7.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS AND DEATHS registered (a) during the week ended Saturday, 7th June, 1930, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 10 COUNTY BOROUGH or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs: the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 6 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough, including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Eleven Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

WEEK ENDED SATURDAY, 14TH JUNE, 1930.

[PRICE 1½d. NET.]

*Oifig um Chláirú Ghinearálta,
 Baile Átha Cliath,
 17adh lá de mhí Meitheamh, 1930.*

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 10.7 and 13.0 ; Dublin Registration Area, 9.6 and 13.0 ; Dublin County Borough, 9.8 and 13.6 ; Cork, 19.3 and 16.8 ; Limerick, 5.3 and 10.3 ; and Waterford, 15.7 and 12.3.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 0.6 per 1,000. Among the 29 deaths registered from all causes for Cork, were 2 from scarlet fever, one from diphtheria, and one from diarrhoea and enteritis of a child under 2 years of age.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 196—104 boys and 92 girls—and the deaths to 93—50 males and 43 females.

The deaths registered, omitting the deaths (numbering 15) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 9.6 per 1,000 of the population. During the twenty-four weeks ended with Saturday last the death rate averaged 16.6, and was 2.0 below the mean rate for the corresponding portions of the ten years 1920–29. The rate for all deaths registered during the twenty-four weeks was 18.5, and during the corresponding periods of the preceding ten years 20.4.

Included in the 78 deaths appertaining to the Area were one from whooping-cough, and 2 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from diarrhoea and enteritis of children under 2 years were 3, 3 and 2. There were no deaths from whooping-cough in the three previous weeks.

There were 7 deaths from pneumonia, comprising 2 from broncho-pneumonia, 2 from lobar-pneumonia and 3 from pneumonia—not otherwise defined. Bronchitis caused 11 deaths.

Tuberculous disease caused 4 deaths (3 of which were from pulmonary tuberculosis, and one from tuberculous adenitis), as against 18, 16 and 16, from all forms of tuberculosis in the three weeks preceding.

Seven deaths were caused by cancer and 13 by diseases of the heart.

Among deaths of infants under one year of age, one was due to whooping-cough, one to bronchitis, 2 to diarrhoea and enteritis, one to premature birth, one to congenital malformation, and 2 to congenital debility.

Eleven of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 9 being infants under one year, of whom 4 were under one month old, and 25 deaths were those of persons aged 65 years and upwards, of whom 19 were 70 years of age or over.

Of the 78 deaths recorded, 36 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 14th June in 107 large English towns (including London, in which the rate was 8.6) was equal to an average annual death-rate of 9.5 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 12.4 per 1,000 persons living, the rate for Glasgow being 11.5 and for Edinburgh 15.9.

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 13.3 and 12.9; Dublin Registration Area, 13.5 and 12.8; Dublin County Borough, 13.3 and 12.9; Cork, 19.3 and 17.5; Limerick, 5.3 and 8.6; and Waterford, 13.7 and 14.2.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 0.3 per 1,000. Among the 29 deaths registered from all causes for Cork, were one from scarlet fever, and one from diphtheria.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 309—143 boys and 166 girls—and the deaths to 126—66 males and 60 females.

The deaths registered, omitting the deaths (numbering 16) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 13.5 per 1,000 of the population. During the twenty-five weeks ended with Saturday last the death rate averaged 16.5, and was 1.9 below the mean rate for the corresponding portions of the ten years 1920–29. The rate for all deaths registered during the twenty-five weeks was 18.4, and during the corresponding periods of the preceding ten years 20.1.

Included in the 110 deaths appertaining to the Area were one from whooping-cough, and one from diphtheria. In the three preceding weeks deaths from whooping-cough were 0, 0 and one; and deaths from diphtheria were one, 0, and 0.

There were 5 deaths from pneumonia, comprising 4 from broncho-pneumonia, and one from lobar-pneumonia. Bronchitis caused 10 deaths.

Tuberculous disease caused 13 deaths (9 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, one from tuberculous peritonitis, and one from general tuberculosis), as against 16, 16 and 4, from all forms of tuberculosis in the three weeks preceding.

Eight deaths were caused by cancer and 18 by diseases of the heart.

Nine accidental deaths were registered, 2 of which were due to burns, one to scalds, and 3 to injuries caused by motor-vehicles.

Among deaths of infants under one year of age, one was due to whooping-cough, 2 to convulsions, 3 to broncho-pneumonia, 3 to premature birth, one to injury at birth, 3 to congenital malformation, and one to congenital debility.

Twenty of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 16 being infants under one year, of whom 7 were under one month old, and 29 deaths were those of persons aged 65 years and upwards, of whom 20 were 70 years of age or over.

Of the 110 deaths recorded, 67 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 21st June in 107 large English towns (including London, in which the rate was 9.2) was equal to an average annual death-rate of 10.4 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11.7 per 1,000 persons living, the rate for Glasgow being 11.8 and for Edinburgh 13.9.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE II.—Showing for the week ended Saturday, 21st June, 1930, the number of Deaths of Residents of the several REGISTRARS' DISTRICTS comprising the DUBLIN REGISTRATION AREA, and the COUNTY BOROUGH OF CORK, and the rate per 1,000 of the population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

* Exclusive of 9 patients in " Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough, including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Eleven Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

----------------------	--------------------------------------	-------------------

*Oifig um Chláirí Ghenearála,
Baile Átha Cliath,
An ceád lá de mhí Iúil, 1930.*

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 12.6 and 12.2; Dublin Registration Area, 12.0 and 11.9; Dublin County Borough, 12.7 and 11.9; Cork, 12.6 and 16.6; Limerick, 7.9 and 7.9; and Waterford, 21.5 and 15.2.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 1.0 per 1,000. Among the 19 deaths registered from all causes for Cork were one from whooping-cough and one from diarrhoea and enteritis of a child under 2 years of age.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 241—115 boys and 126 girls—and the deaths to 110—49 males and 61 females.

The deaths registered, omitting the deaths (numbering 12) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 12.0 per 1,000 of the population. During the twenty-six weeks ended with Saturday last the death rate averaged 16.3, and was 1.9 below the mean rate for the corresponding portions of the ten years 1920–29. The rate for all deaths registered during the twenty-six weeks was 18.2, and during the corresponding periods of the preceding ten years 19.9.

Included in the 98 deaths appertaining to the Area were 2 from whooping-cough, one from diphtheria, and 5 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from whooping-cough were 0, one and one; deaths from diphtheria were 0, 0, and one, and deaths from diarrhoea and enteritis of children under 2 years were 2, 2 and 0.

There were 6 deaths from pneumonia, comprising 4 from broncho-pneumonia, and 2 from pneumonia—not otherwise defined. Bronchitis caused 4 deaths.

Tuberculous disease caused 10 deaths (7 of which were from pulmonary tuberculosis and 3 from tuberculous meningitis), as against 16, 4 and 13 from all forms of tuberculosis in the three weeks preceding.

Eight deaths were caused by cancer and 11 by diseases of the heart.

One accidental death, due to injuries caused by a motor-vehicle, was registered.

Among deaths of infants under one year of age, one was due to whooping-cough, one to meningitis, 3 to convulsions, one to broncho-pneumonia, 4 to diarrhoea and enteritis, 5 to premature birth, one to congenital malformation, and one to congenital debility.

Twenty-four of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 19 being infants under one year, of whom 7 were under one month old, and 33 deaths were those of persons aged 65 years and upwards, of whom 26 were 70 years of age or over.

Of the 98 deaths recorded, 43 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 28th June in 107 large English towns (including London, in which the rate was 8.9) was equal to an average annual death-rate of 9.3 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 10.8 per 1,000 persons living, the rate for Glasgow being 10.3 and for Edinburgh 12.3.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 28th June, 1930, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 10 COUNTRY BOROUGH or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs: the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 13 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough, including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Eleven Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Eireann will be carried out in the Detailed Annual Report.

WEEK ENDED SATURDAY, 5TH JULY, 1930.

[PRICE 1½d. NET.]

*Oifig um Chláirí Ghinearálta,
Baile Átha Cliath,
8adh lá de mhí Iúil, 1930.*

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 12.5 and 12.3; Dublin Registration Area, 11.8 and 11.7; Dublin County Borough, 11.5 and 11.8; Cork, 12.6 and 16.0; Limerick, 22.5 and 10.3; and Waterford, 9.8 and 15.2.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 0.6 per 1,000. Among the 19 deaths registered from all causes for Cork were 2 from diphtheria.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 263—125 boys and 138 girls—and the deaths to 112—47 males and 65 females.

The deaths registered, omitting the deaths (numbering 16) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 11.8 per 1,000 of the population. During the twenty-seven weeks ended with Saturday last the death rate averaged 16.1, and was 1.9 below the mean rate for the corresponding portions of the ten years 1920–29. The rate for all deaths registered during the twenty-seven weeks was 18.0, and during the corresponding periods of the preceding ten years 19.7.

Included in the 96 deaths appertaining to the Area were one from scarlet-fever, one from whooping-cough, and one from diarrhoea and enteritis of a child under 2 years. In the three preceding weeks deaths from whooping-cough were one, one and 2; and deaths from diarrhoea and enteritis of children under 2 years were 2, 0 and 5. There were no deaths from scarlet fever in the three previous weeks.

One death from influenza was registered last week. There were 6 deaths from pneumonia, comprising 3 from broncho-pneumonia, and 3 from pneumonia—not otherwise defined. Bronchitis caused 11 deaths.

Tuberculous disease caused 8 deaths (5 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and one from general tuberculosis), as against 4, 13 and 10 from all forms of tuberculosis in the three weeks preceding.

Thirteen deaths were caused by cancer and 15 by diseases of the heart.

Among deaths of infants under one year of age, one was due to erysipelas, one to convulsions, one to pneumonia, one to diarrhoea and enteritis, 3 to premature birth, and 4 to congenital debility.

Twenty of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 14 being infants under one year, of whom 8 were under one month old, and 24 deaths were those of persons aged 65 years and upwards, of whom 15 were 70 years of age or over.

Of the 96 deaths recorded, 41 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 5th July in 107 large English towns (including London, in which the rate was 9.4) was equal to an average annual death-rate of 9.8 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 12.6 per 1,000 persons living, the rate for Glasgow being 12.7 and for Edinburgh 12.9.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 5th July, 1939, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 10 COUNTY BOROUGH or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 14 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough, including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Eleven Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

No. 28. VOL. LXVII.]

WEEK ENDED SATURDAY, 12TH JULY, 1930.

[PRICE 1½d. NET.]

*Oifig um Chláráí Ghenearála,
Baile Átha Cliath,
15adh lá de mhí Iúil, 1930.*

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 12.9 and 12.8 ; Dublin Registration Area, 11.3 and 12.2 ; Dublin County Borough, 11.9 and 12.4 ; Cork, 15.9 and 15.1 ; Limerick, 18.5 and 13.6 ; and Waterford, 13.7 and 14.7.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 0.6 per 1,000. Among the 24 deaths registered from all causes for Cork were one from diphtheria, and one from diarrhoea and enteritis of a child under 2 years of age ; one of the 7 deaths for Waterford was from whooping-cough, and the 2 deaths for Sligo included one from enteric fever.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 244—131 boys and 113 girls—and the deaths to 112—50 males and 62 females.

The deaths registered, omitting the deaths (numbering 20) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 11.3 per 1,000 of the population. During the twenty-eight weeks ended with Saturday last the death rate averaged 16.0, and was 1.8 below the mean rate for the corresponding portions of the ten years 1920–29. The rate for all deaths registered during the twenty-eight weeks was 17.9, and during the corresponding periods of the preceding ten years 19.5.

Included in the 92 deaths appertaining to the Area were 3 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from diarrhoea and enteritis of children under 2 years were 0, 5 and one.

One death from influenza was registered last week: There were 6 deaths from pneumonia, comprising 2 from broncho-pneumonia, 3 from lobar pneumonia, and one from pneumonia—not otherwise defined. Bronchitis caused 7 deaths.

Tuberculous disease caused 13 deaths (9 of which were from pulmonary tuberculosis, 3 from tuberculous meningitis, and one from general tuberculosis), as against 13, 10 and 8 from all forms of tuberculosis in the three weeks preceding.

Six deaths were caused by cancer and 13 by diseases of the heart.

Among deaths of infants under one year of age, one was due to convulsions, one to bronchitis, 3 to diarrhoea and enteritis, one to premature birth, one to congenital malformation and 3 to congenital debility.

Nineteen of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 13 being infants under one year, of whom 6 were under one month old, and 28 deaths were those of persons aged 65 years and upwards, of whom 22 were 70 years of age or over.

Of the 92 deaths recorded, 46 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 12th July in 107 large English towns (including London, in which the rate was 8.9) was equal to an average annual death-rate of 9.2 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11.5 per 1,000 persons living, the rate for Glasgow being 11.8 and for Edinburgh 11.6.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 11.3 and 12.3; Dublin Registration Area, 11.3 and 11.6; Dublin County Borough, 11.1 and 11.8; Cork, 7.3 and 12.1; Limerick, 11.9 and 15.2; and Waterford, 11.7 and 14.2.

The deaths from the principal epidemic diseases, † recorded for the Eleven Town Districts last week, were equal to an annual rate of 0.7 per 1,000. Among the 11 deaths registered from all causes for Cork were one from diphtheria, and one from diarrhoea and enteritis of a child under 2 years of age; one of the 4 deaths for Galway was from diphtheria, and the 5 deaths for Drogheda included one from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 244—142 boys and 102 girls—and the deaths to 101—47 males and 54 females.

The deaths registered, omitting the deaths (numbering 9) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 11.3 per 1,000 of the population. During the twenty-nine weeks ended with Saturday last the death rate averaged 15.8, and was 1.9 below the mean rate for the corresponding portions of the ten years 1920–29. The rate for all deaths registered during the twenty-nine weeks was 17.7, and during the corresponding periods of the preceding ten years 19.4.

Included in the 92 deaths appertaining to the Area were 2 from diphtheria and 2 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from diphtheria were one, 0 and 0; and deaths from diarrhoea and enteritis of children under 2 years were 5, one and 3.

One death from influenza was registered last week. There were 5 deaths from pneumonia, comprising 4 from broncho-pneumonia, and one from pneumonia—not otherwise defined. Bronchitis caused 4 deaths.

Tuberculous disease caused 19 deaths (14 of which were from pulmonary tuberculosis, 4 from tuberculous meningitis, and one from tuberculosis of bones), as against 10, 8 and 13 from all forms of tuberculosis in the three weeks preceding.

Ten deaths were caused by cancer and 13 by diseases of the heart.

Four accidental deaths were registered, 3 of which were caused by motor vehicles and one by suicide.

Among deaths of infants under one year of age, one was due to tuberculous meningitis, one to broncho-pneumonia, one to pneumonia, 2 to diarrhoea and enteritis, 2 to premature birth, and 3 to congenital debility.

Thirteen of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 11 being infants under one year, of whom 6 were under one month old, and 24 deaths were those of persons aged 65 years and upwards, of whom 19 were 70 years of age or over.

Of the 92 deaths recorded, 41 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 19th July in 107 large English towns (including London, in which the rate was 8.6) was equal to an average annual death-rate of 9.1 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 10.5 per 1,000 persons living, the rate for Glasgow being 9.4 and for Edinburgh 12.7.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 19th July, 1933, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 10 COUNTY BOROUGH or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGH: the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 19 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough, including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Eleven Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

No. 30. VOL. LXVII.]

WEEK ENDED SATURDAY, 26TH JULY, 1930.

[PRICE 1½d. NET.]

*Oifig um Chláirú Ghinearálta,
Baile Átha Cliath,
29adh lá de mhí Iúil, 1930.*

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 14.2 and 12.7; Dublin Registration Area, 14.4 and 14.7; Dublin County Borough, 13.5 and 12.0; Cork, 18.6 and 13.6; Limerick, 14.5 and 16.8; and Waterford, 11.7 and 11.7.

The deaths from the principal epidemic diseases, † recorded for the Eleven Town Districts last week, were equal to an annual rate of 0.6 per 1,000.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 269—135 boys and 134 girls—and the deaths to 132—64 males and 68 females.

The deaths registered, omitting the deaths (numbering 15) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 14.4 per 1,000 of the population. During the thirty weeks ended with Saturday last the death rate averaged 15.8 and was 1.7 below the mean rate for the corresponding portions of the ten years 1920–29. The rate for all deaths registered during the thirty weeks was 17.6, and during the corresponding periods of the preceding ten years 19.2.

Included in the 117 deaths appertaining to the Area were 3 from whooping-cough and one from diphtheria. In the three preceding weeks deaths from whooping-cough were one, 0 and 0; and deaths from diphtheria were 0, 0, and 2.

There were 3 deaths from pneumonia, comprising one from broncho-pneumonia, and 2 from pneumonia—not otherwise defined. Bronchitis caused 6 deaths.

Tuberculous disease caused 9 deaths (8 of which were from pulmonary tuberculosis, and one from tuberculous meningitis,) as against 8, 13 and 19 from all forms of tuberculosis in the three weeks preceding.

Eleven deaths were caused by cancer and 23 by diseases of the heart.

Three accidental deaths were registered, one of which was caused by a motor vehicle.

Among deaths of infants under one year of age, 2 were due to whooping-cough, one to broncho-pneumonia, one to premature birth, one to congenital debility, one to congenital malformation and one to overlying.

Sixteen of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 11 being infants under one year, of whom 4 were under one month old, and 49 deaths were those of persons aged 65 years and upwards, of whom 37 were 70 years of age or over.

Of the 117 deaths recorded, 46 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 26th July in 107 large English towns (including London, in which the rate was 8.8) was equal to an average annual death-rate of 9.4 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11.3 per 1,000 persons living, the rate for Glasgow being 11.9 and for Edinburgh 12.0.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 23rd July, 1930, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 10 COUNTY BOROUGH or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs: the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

TABLE IV.—Showing the NUMBER OF CASES of the undermentioned DISEASES treated in Dublin Hospitals during the week ended Saturday, 26th July, 1930, with the number under treatment at the close of each of the last four weeks.

DISEASES	No. of Cases in Hospital at close of week ended			Week ended 26th July, 1930.			
	July 5	July 12	July 19	No. admitted	Dis- charged	Died	No. under treatment at close of week
Enteric Fever	4	4	5	.	1	.	4
Typhus
Small-pox
Measles	3	3	1	1	.	.	2
Scarlet Fever	37	49	49	8	8	.	49*
Diphtheria	63	81	84	13	14	1	82
Pneumonia	13	11	9	1	2	.	8

* Exclusive of 19 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough, including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Eleven Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Eireann will be carried out in the Detailed Annual Report.

No. 31. VOL. LXVII.]

WEEK ENDED SATURDAY, 2ND AUG., 1930.

[PRICE 1½d. NET.]

Oifig um Chláirí Ghenearála,

Baile Átha Cliath.

6adh lá de mhí Lughnasa, 1930.

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 11.3 and 12.4; Dublin Registration Area, 12.3 and 12.3; Dublin County Borough, 11.9 and 12.1; Cork 8.0 and 12.5; Limerick, 11.9 and 14.2; and Waterford, 5.9 and 10.8.

The deaths from the principal epidemic diseases, † recorded for the Eleven Town Districts last week were equal to an annual rate of 0.6 per 1,000. Among the 12 deaths registered from all causes for Cork was one from diphtheria; one of the 9 deaths for Limerick was also from diphtheria; and the 3 for Waterford included one from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 218—109 boys and 109 girls—and the deaths to 121—58 males and 63 females.

The deaths registered, omitting the deaths (numbering 21) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 12.3 per 1,000 of the population. During the thirty-one weeks ended with Saturday last the death rate averaged 15.6 and was 1.7 below the mean rate for the corresponding portions of the ten years 1920-29. The rate for all deaths registered during the thirty-one weeks was 17.5, and during the corresponding periods of the preceding ten years 19.0.

Included in the 100 deaths appertaining to the Area were one from diphtheria and 4 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from diphtheria were 0, 2 and one; and deaths from diarrhoea and enteritis of children under 2 years were 3, 2, and 0.

There were 5 deaths from pneumonia, comprising one from broncho-pneumonia, one from lobar-pneumonia, and 3 from pneumonia—not otherwise defined. Bronchitis caused 7 deaths.

Tuberculous disease caused 13 deaths (8 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, one from tuberculous peritonitis and 2 from general tuberculosis) as against 13, 19 and 9 from all forms of tuberculosis in the three weeks preceding.

Eleven deaths were caused by cancer and 20 by diseases of the heart.

Two accidental deaths were registered, one of which was due to injuries caused by a motor vehicle.

Among deaths of infants under one year of age, one was due to meningitis, one to convulsions, one to broncho-pneumonia, one to pneumonia, 4 to diarrhoea and enteritis, and 2 to premature birth.

Thirteen of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 10 being infants under one year, of whom 3 were under one month old, and 37 deaths were those of persons aged 65 years and upwards, of whom 23 were 70 years of age or over.

Of the 100 deaths recorded, 34 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 2nd August in 107 large English towns (including London, in which the rate was 9.7) was equal to an average annual death-rate of 9.5 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11.5 per 1,000 persons living, the rate for Glasgow being 11.3 and for Edinburgh 14.1.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 2nd Aug., 1930, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 10 COUNTY BOROUGH or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGH; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 9.7 and 11.6; Dublin Registration Area, 8.7 and 11.7; Dublin County Borough, 9.1 and 11.4; Cork 13.3 and 11.8; Limerick, 9.3 and 11.9; and Waterford, 13.7 and 10.8.

The deaths from the principal epidemic diseases, † recorded for the Eleven Town Districts last week were equal to an annual rate of 0.8 per 1,000. Among the 20 deaths registered from all causes for Cork were one from scarlet-fever, 2 from diphtheria, and one from diarrhoea and enteritis of a child under 2 years; 2 of the 7 deaths for Waterford were from diarrhoea and enteritis of children under 2 years; and the 5 for Drogheda included one from measles.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 195—85 boys and 110 girls—and the deaths to 85—41 males and 44 females.

The deaths registered, omitting the deaths (numbering 14) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 8.7 per 1,000 of the population. During the thirty-two weeks ended with Saturday last the death rate averaged 15.4 and was 1.8 below the mean rate for the corresponding portions of the ten years 1920–29. The rate for all deaths registered during the thirty-two weeks was 17.3, and during the corresponding periods of the preceding ten years 18.9.

Included in the 71 deaths appertaining to the Area were 3 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from diarrhoea and enteritis of children under 2 years were 2, 0, and 4.

There were 4 deaths from pneumonia, comprising one from broncho-pneumonia, one from lobar-pneumonia, and 2 from pneumonia—not otherwise defined. Bronchitis caused 5 deaths.

Tuberculous disease caused 7 deaths (5 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and one from tuberculous peritonitis) as against 19, 9 and 13 from all forms of tuberculosis in the three weeks preceding.

Seven deaths were caused by cancer and 9 by diseases of the heart.

Two accidental deaths were registered, one of which (that of a child aged 14 months) was due to scalds, and one to drowning.

Among deaths of infants under one year of age, 2 were due to diarrhoea and enteritis, 3 to premature birth and one to congenital debility.

Thirteen of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 8 being infants under one year, of whom 6 were under one month old, and 30 deaths were those of persons aged 65 years and upwards, of whom 24 were 70 years of age or over.

Of the 71 deaths recorded, 36 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 9th August in 107 large English towns (including London, in which the rate was 8.5) was equal to an average annual death-rate of 9.0 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11.5 per 1,000 persons living, the rate for Glasgow being 11.9 and for Edinburgh 11.0.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTH and DEATHS registered (a) during the week ended Saturday, 9th August, 1932, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 10 COUNTY BOROUGH or URBAN DISTRICT, and to BELFAST and LONDONDERRY COUNTY BOROUGH: the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 18 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough, including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Eleven Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

WEEK ENDED SATURDAY, 16TH AUGUST, 1930.

[PRICE 1½d. NET.]

*Oifig um Chlárú Gheneardála,
Baile Átha Cliath,
19adh lá de mhí Lughnasa, 1930.*

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 8.9 and 11.0 ; Dublin Registration Area, 9.8 and 11.3 ; Dublin County Borough, 10.7 and 11.3 ; Cork, 9.3 and 12.3 ; Limerick, 4.0 and 9.9 ; and Waterford, 7.8 and 9.8.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 0.9 per 1,000. Among the 14 deaths registered from all causes for Cork were one from scarlet-fever, one from diphtheria, and one from diarrhoea and enteritis of a child under 2 years.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 239—124 boys and 115 girls—and the deaths to 90—44 males and 46 females.

The deaths registered, omitting the deaths (numbering 10) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 9.8 per 1,000 of the population. During the thirty-three weeks ended with Saturday last the death rate averaged 15.3, and was 1.7 below the mean rate for the corresponding portions of the ten years 1920–29. The rate for all deaths registered during the thirty-three weeks was 17.1, and during the corresponding periods of the preceding ten years 18.7.

Included in the 80 deaths appertaining to the Area were one from whooping-cough, one from diphtheria, and 6 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from whooping-cough were 3, 0 and 0 ; deaths from diphtheria were one, one and 0 ; and deaths from diarrhoea and enteritis of children under 2 years were 0, 4 and 3.

One death was caused by influenza. There were 2 deaths from pneumonia, comprising one from lobar-pneumonia, and one from pneumonia—not otherwise defined. Bronchitis caused 3 deaths.

Tuberculous disease caused 9 deaths (6 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and 2 from other forms of tuberculous disease) as against 9, 13 and 7 from all forms of tuberculosis in the three weeks preceding.

Seven deaths were caused by cancer and 15 by diseases of the heart.

Three accidental deaths were registered, one of which was due to collision with a Tram, and one to drowning.

Among deaths of infants under one year of age, 5 were due to diarrhoea and enteritis, 2 to premature birth, 2 to congenital malformation, and 5 to congenital debility.

Sixteen of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 14 being infants under one year, of whom 7 were under one month old, and 25 deaths were those of persons aged 65 years and upwards, of whom 19 were 70 years of age or over.

Of the 80 deaths recorded, 33 occurred in hospitals and other public institutions.

SCOTLAND.

The average death-rate for 16 principal towns of Scotland was 9.7 per 1,000 persons living, the rate for Glasgow being 10.0 and for Edinburgh 9.9.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 16th August, 1930, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 10 COUNTY BOROUGH or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGH: the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 10 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough, including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Eleven Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Eireann will be carried out in the Detailed Annual Report.

WEEK ENDED SATURDAY, 23RD AUGUST, 1930.

[PRICE 1½d. NET.]

*Oifig um Chláirí Ghenearála,
Baile Átha Cliath,
26adh lá de mhí Lughnasa, 1930.*

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 11.9 and 10.5; Dublin Registration Area, 11.3 and 10.5; Dublin County Borough, 13.2 and 11.2; Cork, 14.0 and 11.2; Limerick, 21.1 and 11.6; and Waterford, 9.8 and 9.3.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 0.4 per 1,000.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 232—134 boys and 98 girls—and the deaths to 109—63 males and 46 females.

The deaths registered, omitting the deaths (numbering 17) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 11.3 per 1,000 of the population. During the thirty-four weeks ended with Saturday last the death rate averaged 15.1, and was 1.8 below the mean rate for the corresponding portions of the ten years 1920–29. The rate for all deaths registered during the thirty-four weeks was 17.0, and during the corresponding periods of the preceding ten years 18.6

Included in the 92 deaths appertaining to the Area were one from whooping-cough, and 2 from diphtheria. In the three preceding weeks deaths from whooping-cough were 0, 0 and one; and deaths from diphtheria were one, 0 and one.

One death was caused by influenza. There were 4 deaths from pneumonia, comprising 2 from broncho-pneumonia, one from lobar-pneumonia, and one from pneumonia—not otherwise defined. Bronchitis caused 10 deaths.

Tuberculous disease caused 12 deaths (6 of which were from pulmonary tuberculosis, 3 from tuberculous meningitis, one from tuberculous peritonitis, and 2 from other forms of tuberculous disease) as against 13, 7 and 9, from all forms of tuberculosis in the three weeks preceding.

Thirteen deaths were caused by cancer and 11 by diseases of the heart.

Five accidental deaths were registered, 2 of which were due to burns, 2 to injuries caused by motor vehicles, and one by a horse-drawn vehicle.

Among deaths of infants under one year of age, one was due to convulsions, 2 to premature birth, and 3 to congenital debility.

Sixteen of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 6 being infants under one year, of whom 3 were under one month old, and 25 deaths were those of persons aged 65 years and upwards, of whom 18 were 70 years of age or over.

Of the 92 deaths recorded, 53 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 23rd August in 107 large English towns (including London, in which the rate was 8.7) was equal to an average annual death-rate of 9.1 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11.1 per 1,000 persons living, the rate for Glasgow being 11.4 and for Edinburgh 10.6.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 23rd August, 1930, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 10 COUNTY BOROUGH or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs: the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

(a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the Dublin Registration Area and its component parts the populations given are those estimated to the middle of 1930. For Belfast and Londonderry the populations shown are those according to the Census of 1926. The estimate shown for London relates to the civil population in 1929. The populations for Glasgow and Edinburgh are those estimated to the middle of 1930. (c) See note (†) at foot of first page. (d) Observations at Ordnance Survey Office, Phoenix Park. (e) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). (f) Botanic Gardens, Glasnevin. (g) Marketree. (h) Including one death from cerebro-spinal meningitis.

Rate per 1,000 of the population of the respective districts represented thereby, and of the Deaths from the Principal Diseases, and of the Deaths from which the deceased were admitted.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough, including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Eleven Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Eireann will be carried out in the Detailed Annual Report.

No. 35. VOL. LXVII.]

WEEK ENDED SATURDAY, 30TH AUGUST, 1930.

[PRICE 1½d. NET.]

*Oifig um Chláirí Ghenearála,
Baile Átha Cliath,
2adh lá de mhi Meadhon Fогhmhair, 1930.*

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 11.0 and 10.4; Dublin Registration Area, 10.8 and 10.2; Dublin County Borough, 12.5 and 11.4; Cork, 10.0 and 11.7; Limerick, 15.9 and 12.6; and Waterford, 5.9 and 9.3.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 1.1 per 1,000. Among the 15 deaths registered from all causes for Cork were one from diphtheria and one from diarrhoea and enteritis of a child under 2 years; 2 of the 3 deaths for Waterford were from diarrhoea and enteritis of children under 2 years, one of the 6 for Galway was from diphtheria; and the 3 deaths for Tralee included one from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 243—126 boys and 117 girls—and the deaths to 110—57 males and 53 females.

The deaths registered, omitting the deaths (numbering 22) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 10.8 per 1,000 of the population. During the thirty-five weeks ended with Saturday last the death rate averaged 15.0, and was 1.8 below the mean rate for the corresponding portions of the ten years 1920–29. The rate for all deaths registered during the thirty-five weeks was 16.9, and during the corresponding periods of the preceding ten years 18.5.

Included in the 88 deaths appertaining to the Area were one from whooping-cough, and 6 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from whooping-cough were 0, one and one; and deaths from diarrhoea and enteritis of children under 2 years were 3, 6 and 0.

There were 4 deaths from pneumonia, comprising 2 from broncho-pneumonia, and 2 from lobar-pneumonia. Bronchitis caused 5 deaths.

Tuberculous disease caused 13 deaths (10 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and 2 from general tuberculosis) as against 7, 9 and 12, from all forms of tuberculosis in the three weeks preceding.

Ten deaths were caused by cancer and 8 by diseases of the heart.

Four accidental deaths were registered, one of which (that of a child aged 2 years 6 months) was due to burns, one to drowning and one to injuries caused by a motor vehicle.

Among deaths of infants under one year of age, one was due to whooping-cough, one to tuberculous meningitis, one to meningitis, one to convulsions, one to broncho-pneumonia, 5 to diarrhoea and enteritis, 2 to premature birth, one to congenital malformation and one to congenital debility.

Twenty-three of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 19 being infants under one year, of whom 4 were under one month old, and 25 deaths were those of persons aged 65 years and upwards, of whom 19 were 70 years of age or over.

Of the 88 deaths recorded, 38 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 30th August in 107 large English towns (including London, in which the rate was 11.9) was equal to an average annual death-rate of 11.2 per 1,000 of the estimated civil population.

The averaged death-rate for 16 principal towns of Scotland was 11.4 per 1,000 persons living, the rate for Glasgow being 11.6 and for Edinburgh 10.9.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 11.—Showing for the several years, the rate per 1,000 of the population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

IN RELATION TO THE

DUBLIN REGISTRATION AREA,

CONSISTING OF THE COUNTY BOROUGH OF DUBLIN AND THE URBAN DISTRICTS OF
RATHMINES AND RATHGAR, PEMBROKE, BLACKROCK, AND DUN LAOGHAIRE

AND TO

TEN PRINCIPAL PROVINCIAL URBAN AREAS OF SAORSTÁT ÉIREANN

By Authority of the Registrar-General.

To be purchased through any Bookseller or directly from
EASON & SON, LTD., 40, 41 LOWER O'CONNELL STREET, DUBLIN.

No. 36. VOL. LXVII.]

WEEK ENDED SATURDAY, 6TH SEPTEMBER, 1930.

[PRICE 1½d. NET.]

Oifig um Chláirí Ghenearála,

Baile Átha Cliath,

9adh lá de mhí Meadhon Fогhmhair, 1930.

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 10.7 and 10.6; Dublin Registration Area, 11.0 and 10.7; Dublin County Borough, 11.9 and 12.1; Cork, 12.0 and 11.3; Limerick, 11.9 and 13.2; and Waterford, 5.9 and 7.4.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 0.4 per 1,000.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 195—94 boys and 101 girls—and the deaths to 105—47 males and 58 females.

The deaths registered, omitting the deaths (numbering 15) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 11.0 per 1,000 of the population. During the thirty-six weeks ended with Saturday last the death rate averaged 14.9, and was 1.9 below the mean rate for the corresponding portions of the ten years 1920–29. The rate for all deaths registered during the thirty-six weeks was 16.8, and during the corresponding periods of the preceding ten years 18.4.

Included in the 90 deaths appertaining to the Area were 4 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from diarrhoea and enteritis of children under 2 years were 6, 0 and 6.

There were 3 deaths from pneumonia, comprising 2 from broncho-pneumonia, and one from pneumonia—not otherwise defined. Bronchitis caused 8 deaths.

Tuberculous disease caused 17 deaths (15 of which were from pulmonary tuberculosis, one from tuberculous meningitis, and one from general tuberculosis) as against 9, 12 and 13, from all forms of tuberculosis in the three weeks preceding.

Six deaths were caused by cancer and 14 by diseases of the heart.

Among deaths of infants under one year of age, 2 were due to convulsions, 2 to broncho-pneumonia, 4 to diarrhoea and enteritis, one to premature birth, 4 to congenital malformation and 2 to congenital debility.

Twenty-four of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 18 being infants under one year, of whom 9 were under one month old, and 21 deaths were those of persons aged 65 years and upwards, of whom 17 were 70 years of age or over.

Of the 90 deaths recorded, 42 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 6th September in 107 large English towns (including London, in which the rate was 10.6) was equal to an average annual death-rate of 9.5 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 9.7 per 1,000 persons living, the rate for Glasgow being 10.4 and for Edinburgh 10.0.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 6th September, 1930, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 10 COUNTY BOROUGH or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGH: the Number of Uncertified Deaths, with the Number of Uncertified Births, also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 11 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough, including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Eleven Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

WEEK ENDED SATURDAY, 20TH SEPTEMBER, 1930.

[PRICE 1½d. NET.]

*Oifig um Chlárú Ghenearálta,
Baile Átha Cliath,
23adh lá de mhí Meadhon Foghmhair, 1930.*

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 12.1 and 11.1; Dublin Registration Area, 11.8 and 11.2; Dublin County Borough, 12.0 and 12.0; Cork, 12.6 and 11.3; Limerick, 13.2 and 12.2; and Waterford, 5.9 and 7.4.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 1.2 per 1,000. Among the 19 deaths from all causes for Cork were 2 from diphtheria; and the 10 deaths for Limerick included one from enteric fever, one from diphtheria, and 2 from diarrhoea and enteritis of children under 2 years of age.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 216—118 boys and 98 girls—and the deaths to 109—52 males and 57 females.

The deaths registered, omitting the deaths (numbering 13) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 11.8 per 1,000 of the population. During the thirty-eight weeks ended with Saturday last the death rate averaged 14.7, and was 1.9 below the mean rate for the corresponding portions of the ten years 1920–29. The rate for all deaths registered during the thirty-eight weeks was 16.6, and during the corresponding periods of the preceding ten years 18.2.

Included in the 96 deaths appertaining to the Area were 2 from diphtheria and 7 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from diarrhoea and enteritis of children under 2 years were 6, 4 and 8. There were no deaths from diphtheria in the three previous weeks. One death from malaria was registered.

One death from influenza and 2 from broncho-pneumonia were registered last week. Bronchitis caused 7 deaths.

Tuberculous disease caused 12 deaths (10 of which were from pulmonary tuberculosis and 2 from tuberculous meningitis) as against 13, 17 and 12 from all forms of tuberculosis in the three weeks preceding.

Nine deaths were caused by cancer and 17 by diseases of the heart.

Among deaths of infants under one year of age, one was due to bronchitis, one to broncho-pneumonia, 5 to diarrhoea and enteritis, one to congenital malformation, and one to congenital debility.

Fourteen of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 9 being infants under one year, of whom one was under one month old, and 27 deaths were those of persons aged 65 years and upwards, of whom 17 were 70 years of age or over.

Of the 96 deaths recorded, 49 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 20th September in 107 large English towns (including London, in which the rate was 8.9) was equal to an average annual death-rate of 9.2 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 10.9 per 1,000 persons living, the rate for Glasgow being 11.6 and for Edinburgh 12.2.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 20th September, 1930, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 10 COUNTY BOROUGHS or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHS; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 20 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough, including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Eleven Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

No. 32. VOL. LXVII.]

WEEK ENDED SATURDAY, 20TH SEPTEMBER, 1930.

[PRICE 1½d. NET.]

*Oifig um Chláirí Ghenearála,
Baile Átha Cliath,
23adh lá de mhí Meadhon Fómhair, 1930.*

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 12.1 and 11.1; Dublin Registration Area, 11.8 and 11.2; Dublin County Borough, 12.0 and 12.0; Cork, 12.6 and 11.3; Limerick, 13.2 and 12.2; and Waterford, 5.9 and 7.4.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 1.2 per 1,000. Among the 19 deaths from all causes for Cork were 2 from diphtheria; and the 10 deaths for Limerick included one from enteric fever, one from diphtheria, and 2 from diarrhoea and enteritis of children under 2 years of age.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 216—118 boys and 98 girls—and the deaths to 109—52 males and 57 females.

The deaths registered, omitting the deaths (numbering 13) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 11.8 per 1,000 of the population. During the thirty-eight weeks ended with Saturday last the death rate averaged 14.7, and was 1.9 below the mean rate for the corresponding portions of the ten years 1920–29. The rate for all deaths registered during the thirty-eight weeks was 16.6, and during the corresponding periods of the preceding ten years 18.2.

Included in the 96 deaths appertaining to the Area were 2 from diphtheria and 7 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from diarrhoea and enteritis of children under 2 years were 6, 4 and 8. There were no deaths from diphtheria in the three previous weeks. One death from malaria was registered.

One death from influenza and 2 from broncho-pneumonia were registered last week. Bronchitis caused 7 deaths.

Tuberculous disease caused 12 deaths (10 of which were from pulmonary tuberculosis and 2 from tuberculous meningitis) as against 13, 17 and 12 from all forms of tuberculosis in the three weeks preceding.

Nine deaths were caused by cancer and 17 by diseases of the heart.

Among deaths of infants under one year of age, one was due to bronchitis, one to broncho-pneumonia, 5 to diarrhoea and enteritis, one to congenital malformation, and one to congenital debility.

Fourteen of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 9 being infants under one year, of whom one was under one month old, and 27 deaths were those of persons aged 65 years and upwards, of whom 17 were 70 years of age or over.

Of the 96 deaths recorded, 49 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 20th September in 107 large English towns (including London, in which the rate was 8.9) was equal to an average annual death-rate of 9.2 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 10.9 per 1,000 persons living, the rate for Glasgow being 11.6 and for Edinburgh 12.2.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 20th September, 1930, in relation to the DUBLIN Registration Area, to each of the undermentioned 10 COUNTY BOROUGH or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs: the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 20 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough, including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Eleven Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

DUBLIN REGISTRATION AREA,
CONSISTING OF THE COUNTY BOROUGH OF DUBLIN AND THE URBAN DISTRICTS OF
RATHMINES AND RATHGAR, PEMBROKE, BLACKROCK, AND DUN LAOGHAIRE
AND TO
TEN PRINCIPAL PROVINCIAL URBAN AREAS OF SAORSTÁT ÉIREANN

By Authority of the Registrar-General.

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 5 NASSAU STREET, DUBLIN.

No. 39. VOL. LXVII.] WEEK ENDED SATURDAY, 27TH SEPTEMBER, 1930. [PRICE 1½d. NET.

*Oifig an Árd Chláirathóra,
Baile Átha Cliath,
30adh lá de mhí Meadhon Fómhair, 1930.*

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 11.1 and 11.1; Dublin Registration Area, 9.7 and 10.9; Dublin County Borough, 10.4 and 11.5; Cork, 14.0 and 12.3; Limerick, 11.9 and 11.2; and Waterford, 15.7 and 9.8.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 0.7 per 1,000.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 305—148 boys and 157 girls—and the deaths to 84—46 males and 38 females

The deaths registered, omitting the deaths (numbering 5) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 9.7 per 1,000 of the population. During the thirty-nine weeks ended with Saturday last the death rate averaged 14.6, and was 1.9 below the mean rate for the corresponding portions of the ten years 1920–29. The rate for all deaths registered during the thirty-nine weeks was 16.4, and during the corresponding periods of the preceding ten years 18.2.

Included in the 79 deaths appertaining to the Area were one from measles, one from whooping-cough, 3 from diphtheria, and 4 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from measles were 0, one and 0; deaths from diphtheria were 0, 0 and 2; and deaths from diarrhoea and enteritis of children under 2 years were 4, 8 and 7. There were no deaths from whooping-cough in the three previous weeks.

One death was caused by influenza. There were 6 deaths from pneumonia, comprising 2 from broncho-pneumonia, one from lobar-pneumonia, and 3 from pneumonia—not otherwise defined. Bronchitis caused 5 deaths.

Tuberculous disease caused 4 deaths (all of which were from pulmonary tuberculosis) as against 17, 12 and 12 from all forms of tuberculosis in the three weeks preceding.

Eight deaths were caused by cancer and 6 by diseases of the heart.

One death by suicide was registered.

Among deaths of infants under one year of age, one was due to whooping-cough, one to diphtheria, one to meningitis, 2 to broncho-pneumonia, one to pneumonia, 3 to diarrhoea and enteritis, and 4 to congenital debility.

Twenty-two of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 17 being infants under one year, all of whom were over one month old, and 23 deaths were those of persons aged 65 years and upwards, of whom 19 were 70 years of age or over.

Of the 79 deaths recorded, 39 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 27th September in 107 large English towns (including London, in which the rate was 9.2) was equal to an average annual death-rate of 9.6 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11.6 per 1,000 persons living, the rate for Glasgow being 12.3 and for Edinburgh 12.1.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 27th September, 1930, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 10 COUNTY BOROUGH or URBAN DISTRICTS, and to BELFAST and LONDONDERY COUNTY BOROUGHs: the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

(a) See note at foot of fourth page. (b) According to the Census of 1926, but in the cases of the Dublin Registration Area and its component parts the populations given are those estimated to the middle of 1930. For Belfast and Londonderry the populations shown are those according to the Census of 1926. The estimate shown for London relates to the civil population in 1929. The populations for Glasgow and Edinburgh are those estimated to the middle of 1930. (c) See note (†) at foot of first page. (d) Observations at Ordnance Survey Office, Phoenix Park. (e) Observations by Sir John Moore, taken at Fitzwilliam Square (Sunshine returned by Trinity College). (f) Botanic Gardens, Glasnevin. (g) Markree. (h) Including 2 deaths from cerebro-spinal meningitis.

TABLE 11.—Showing for the week ended Saturday, 21st September, 1920, the number of deaths of residents of the several REGISTRARS' DISTRICTS comprising the Dublin Registration Area, and by the Deaths from the principal Epidemic Diseases†; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

* Exclusive of 18 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough, including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District.

The births and deaths occurring in Institutions appertaining to localities situated outside the Eleven Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will be carried out in the Detailed Annual Report.

CONSISTING OF THE COUNTY BOROUGH OF DUBLIN AND THE URBAN DISTRICTS OF
RATHMINES AND RATHGAR, PEMBROKE, BLACKROCK, AND DUN LAOGHAIRE
AND TO
TEN PRINCIPAL PROVINCIAL URBAN AREAS OF SAORSTÁT ÉIREANN

By Authority of the Registrar-General.

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 5 NASSAU STREET, DUBLIN.

No. 40. VOL. LXVII.]

WEEK ENDED SATURDAY, 4TH OCTOBER, 1930.

[PRICE 1½d. NET.]

*Oifig an Árd Chláirathóra,
Baile Átha Cliath,
7adh lá de mhí Deireadh Fómhair, 1930.*

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 12.9 and 11.7; Dublin Registration Area, 13.7 and 11.6; Dublin County Borough, 13.5 and 11.9; Cork, 14.0 and 12.8; Limerick, 11.9 and 11.2; and Waterford, 17.6 and 12.7.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 0.6 per 1,000.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 245—123 boys and 122 girls—and the deaths to 129—53 males and 76 females.

The deaths registered, omitting the deaths (numbering 17) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 13.7 per 1,000 of the population. During the forty weeks ended with Saturday last the death rate averaged 14.6, and was 1.8 below the mean rate for the corresponding portions of the ten years 1920–29. The rate for all deaths registered during the forty weeks was 16.4, and during the corresponding periods of the preceding ten years 18.1.

Included in the 112 deaths appertaining to the Area were 2 from whooping-cough, 2 from diphtheria, and 2 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from whooping-cough were 0, 0 and one; deaths from diphtheria were 0, 2 and 3; and deaths from diarrhoea and enteritis of children under 2 years were 8, 7 and 4. One death from epidemic rose-rash was registered.

There were 2 deaths from pneumonia—not otherwise defined. Bronchitis caused 10 deaths.

Tuberculous disease caused 11 deaths (6 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, one from tuberculous enteritis, and 2 from other forms of tuberculous disease) as against 12, 12 and 4 from all forms of tuberculosis in the three weeks preceding.

Fifteen deaths were caused by cancer and 18 by diseases of the heart.

Four accidental deaths were registered, one of which was due to drowning.

Among deaths of infants under one year of age, one was due to tuberculosis, 2 to bronchitis, one to pneumonia, 2 to diarrhoea and enteritis, 6 to premature birth, one to congenital malformation, and one to congenital debility.

Twenty-four of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 16 being infants under one year, of whom 9 were under one month old, and 33 deaths were those of persons aged 65 years and upwards, of whom 23 were 70 years of age or over.

Of the 112 deaths recorded, 61 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 4th October in 107 large English towns (including London, in which the rate was 10.0) was equal to an average annual death-rate of 10.0 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 10.9 per 1,000 persons living, the rate for Glasgow being 10.7 and for Edinburgh 14.0.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 4th October, 1930, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 10 COUNTY BOROUGH or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGHs: the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

TABLE IV.—Showing the NUMBER OF CASES of the undermentioned DISEASES treated in Dublin Hospitals during the week ended **Saturday, 4th October, 1930**, with the number under treatment at the close of each of the last four weeks.

DISEASES	No. of Cases in Hospital at close of week ended			Week ended 4th October, 1930.			
	Sept. 13	Sept. 20	Sept. 27	No. admitted	Dis- charged	Died	No. under treatment at close of week
Enteric Fever	2	4	2	.	.	6
Typhus
Small-pox
Measles ...	2	3	3	2	.	.	5
Scarlet Fever ...	44	40	35	14	8	.	41*
Diphtheria ...	39	39	44	19	14	4	45
Pneumonia ...	8	11	7	2	2	.	7

* Exclusive of 15 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—In Tables I. and II. partial correction is made for deaths in Institutions—in the case of Dublin by the inclusion of deaths occurring in Institutions, situated in Bray No. 2 and Killiney Registrars' Districts, of residents of Blackrock and Dún Laoghaire Urban Districts. The figures for Cork Co. Borough include births and deaths relating to Cork residents occurring in Institutions located in Cork Rural No. 1, and Rural No. 2 Districts, those for Limerick Co. Borough, including births and deaths taking place in Institutions situated in Limerick Rural Registrar's District. The births and deaths occurring in Institutions appertaining to localities situated outside the Eleven Town Districts, are excluded, but complete correction is made for the deaths registered of residents within these areas. Full correction for births and deaths in Institutions embracing the whole of Saorstát Eireann will be carried out in the Detailed Annual Report.

WEEKLY RETURN OF BIRTHS AND DEATHS

IN RELATION TO THE

DUBLIN REGISTRATION AREA,

CONSISTING OF THE COUNTY BOROUGH OF DUBLIN AND THE URBAN DISTRICTS OF
RATHMINES AND RATHGAR, PEMBROKE, BLACKROCK, AND DUN LAOGHAIRE

AND TO

TEN PRINCIPAL PROVINCIAL URBAN AREAS OF SAORSTÁT ÉIREANN

By Authority of the Registrar-General.

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 5 NASSAU STREET, DUBLIN.

No. 41. VOL. LXVII.]

WEEK ENDED SATURDAY, 11TH OCTOBER, 1930.

[PRICE 1½d. NET.]

*Oifig an Árd Chláirathóra,
Baile Átha Cliath,
14adh lá de mhí Deireadh Fómhair, 1930.*

ELEVEN TOWN DISTRICTS.

The Births and Deaths* recorded for the Dublin Registration Area and for the ten principal provincial urban areas of Saorstát Éireann, with the annual rates per 1,000 of the population, which, estimated to the middle of 1930, is 654,519, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Eleven Town Districts, 11.0 and 11.8; Dublin Registration Area, 9.3 and 11.1; Dublin County Borough, 8.5 and 11.1; Cork, 13.3 and 13.5; Limerick, 26.4 and 15.9; and Waterford, 15.7 and 13.7.

The deaths from the principal epidemic diseases,† recorded for the Eleven Town Districts last week, were equal to an annual rate of 0.7 per 1,000. Among the 20 deaths from all causes for Limerick were one from enteric fever and one from diarrhoea and enteritis of a child under 2 years.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the total number of births registered during the week amounted to 234—129 boys and 105 girls—and the deaths to 93—36 males and 57 females.

The deaths registered, omitting the deaths (numbering 17) of persons admitted into public institutions from localities outside the Area, represent an annual rate of mortality of 9.3 per 1,000 of the population. During the forty-one weeks ended with Saturday last the death rate averaged 14.4, and was 2.0 below the mean rate for the corresponding portions of the ten years 1920–29. The rate for all deaths registered during the forty-one weeks was 16.3, and during the corresponding periods of the preceding ten years 18.0.

Included in the 76 deaths appertaining to the Area were one from diphtheria, and 4 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from diphtheria were 2, 3 and 2; and deaths from diarrhoea and enteritis of children under 2 years were 7, 4 and 2.

There were 2 deaths from pneumonia, comprising one from broncho-pneumonia, and one from pneumonia—not otherwise defined. Bronchitis caused 2 deaths.

Tuberculous disease caused 10 deaths (8 of which were from pulmonary tuberculosis, one from tuberculous peritonitis, and one from tuberculous adenitis) as against 12, 4 and 11 from all forms of tuberculosis in the three weeks preceding.

Ten deaths were caused by cancer and 13 by diseases of the heart.

Among deaths of infants under one year of age, one was due to broncho-pneumonia, 3 to diarrhoea and enteritis, and 4 to premature birth.

Twelve of the deaths registered during the week appertaining to the Area were those of children under 5 years of age, 10 being infants under one year, of whom 4 were under one month old, and 27 deaths were those of persons aged 65 years and upwards, of whom 22 were 70 years of age or over.

Of the 76 deaths recorded, 35 occurred in hospitals and other public institutions.

ENGLAND AND SCOTLAND.

The mortality among civilians for the week ended 11th October in 107 large English towns (including London, in which the rate was 10.1) was equal to an average annual death-rate of 9.9 per 1,000 of the estimated civil population.

The average death-rate for 16 principal towns of Scotland was 11.8 per 1,000 persons living, the rate for Glasgow being 12.6 and for Edinburgh 12.6.

* See note at foot of fourth page.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended Saturday, 11th October, 1930, in relation to the DUBLIN REGISTRATION AREA, to each of the undermentioned 10 COUNTY BOROUGH or URBAN DISTRICTS, and to BELFAST and LONDONDERRY COUNTY BOROUGH: the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

WEEKLY RETURN OF BIRTHS AND DEATHS

IN RELATION TO THE

TWELVE PRINCIPAL TOWNS OF SAORSTAT ÉIREANN,

By Authority of the Registrar-General.

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 5 NASSAU STREET, DUBLIN.

No. 42. VOL. LXVII.]

WEEK ENDED SATURDAY, 18TH OCTOBER, 1930.

[PRICE 1½d. NET.]

*Oifig an Ard Chláraitheora,
Baile Átha Cliath,
21adh lá de mhí Deireadh Fómhair, 1930.*

PRINCIPAL TOWNS.

Particulars of the Births and Deaths* recorded for the **Twelve Principal Towns** as now constituted†, the estimated population of which in the middle of 1930 was 675,719, are given in Table 1. Deaths from all causes recorded for these areas last week were equivalent to an annual rate of 11.4 per 1,000 of the population, the rate for the principal epidemic diseases‡ being 0.8. For the City of Dublin the rate from all causes was 11.8, for the Borough of Dún Laoghaire 10.3, for Cork County Borough 13.3, for Limerick 13.2 and for Waterford 15.7.

During the past four weeks, the death rate for Cork was 13.7, for Limerick 15.9, and for Waterford 16.2.

Among the 20 deaths from all causes for Cork was one from diphtheria and 3 from diarrhoea and enteritis of children under 2 years of age.

CITY OF DUBLIN.—The number of births registered during the week was 200—96 boys and 104 girls, and the number of deaths 110—56 males and 54 females. Twenty-nine of the births and 17 of the deaths related to persons belonging to other localities.

The 93 deaths appertaining to the city are equivalent to a rate of 11.8 per 1,000 of the population.

Deaths from the principal epidemic diseases numbered 5, comprising 2 from whooping-cough and 3 from diarrhoea and enteritis of children under 2 years.

Tuberculous disease caused 9 deaths (6 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and one from spinal tuberculosis).

Eight deaths were caused by cancer and 12 by diseases of the heart.

There were 8 deaths from pneumonia, comprising 5 from broncho-pneumonia, one from lobar pneumonia and 2 from pneumonia—not otherwise defined.

Three accidental deaths were registered, one of which (that of a child aged 3 years) was caused by scalds. There was also one death by suicide.

Among deaths of infants under one year of age, one was due to whooping-cough, one to tuberculous meningitis, one to bronchitis, one to broncho-pneumonia, 3 to diarrhoea and enteritis, 2 to premature birth, and 5 to congenital debility.

Nineteen of the deaths recorded for the City during the week were those of children under 5 years, 14 being those of infants under one year, of whom 4 were under one month old, and 31 were those of persons aged 65 years and upwards, of whom 19 were aged 70 years or over.

Of the 93 deaths recorded, 45 occurred in hospitals and other public institutions.

FORMER DUBLIN REGISTRATION AREA.—For the Dublin Registration Area which consisted of the former County Borough of Dublin and the former Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Dún Laoghaire, the aggregate births, deaths and deaths from the principal epidemic diseases appertaining thereto, as registered during last week, were represented by annual rates of 21.3, 12.1, and 0.7, respectively. (See Table 1). During the forty-two weeks ended Saturday last, the death rate from all causes averaged 14.4 and was 1.9 below the mean rate for the corresponding portions of the ten years, 1920-29.

NORTHERN IRELAND AND GREAT BRITAIN.—The mortality from all causes in Belfast County Borough during last week was equal to an average annual rate of 13.9 per 1,000 of the population, and for Londonderry 8.1.

In 107 large English towns (including London in which the rate was 10.4), the mortality among civilians was 10.7 per 1,000 of the estimated civil population.

The average death rate for 16 principal towns of Scotland was 11.2 per 1,000 persons living, the rate for Glasgow being 12.7 and for Edinburgh, 11.6.

* See note at foot of fourth page.

† The Local Government (Dublin) Act, constituting the City of Dublin and the Borough of Dún Laoghaire, came into force on the 14th October, 1930. The new City consists of the former County Borough of Dublin, the former Urban Districts of Pembroke and Rathmines and Rathgar, together with certain rural areas. The new Borough comprises the former Urban Districts of Blackrock, Dún Laoghaire, Dalkey, and Killiney and Ballybrack.

‡ Enteric fever, typhus, small pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended **Saturday, 18th October, 1930**, in relation to DUBLIN CITY, to each of the under-mentioned **Eleven Towns** and to BELFAST and LONDONDERRY COUNTY BOROUGHs: the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertained Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

Pneumonia ...	7	7	7	6	1	1	11

* Exclusive of 17 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—For the purposes of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities, but the figures shown for Dún Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2 and Limerick Rural, respectively, relating to residents of these Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths occurring in the Registrars' Districts of residents of the Boroughs above named are included, as in the case of births. In addition the deaths in Institutions situated in the twelve towns have been assigned to one or other of the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will appear in the Detailed Annual Report.

WEEKLY RETURN OF BIRTHS AND DEATHS

IN RELATION TO THE

TWELVE PRINCIPAL TOWNS OF SAORSTAT EIREANN,

By Authority of the Registrar-General.

To be purchased through any Bookseller or directly from

THE GOVERNMENT PUBLICATIONS SALE OFFICE, 5 NASSAU STREET, DUBLIN.

No. 43. VOL. LXVII.]

WEEK ENDED SATURDAY, 25TH OCTOBER, 1930.

[PRICE 1½d. NET.]

*Oifig an Ard Chláirathóra,
Baile Átha Cliath,
28adh lá de mhí Deireadh Fómhair, 1930.*

PRINCIPAL TOWNS.

Particulars of the Births and Deaths* recorded for the **Twelve Principal Towns** as now constituted†, the estimated population of which in the middle of 1930 was 675,719, are given in Table 1. Deaths from all causes recorded for these areas last week were equivalent to an annual rate of 12.4 per 1,000 of the population, the rate for the principal epidemic diseases‡ being 0.6. For the City of Dublin the rate from all causes was 12.7, for the Borough of Dún Laoghaire 7.4, for Cork County Borough 14.6, for Limerick 13.2 and for Waterford 5.9.

During the past four weeks the death rate for Cork was 13.8, for Limerick 16.2, and for Waterford 13.7.

Among the 10 deaths from all causes for Limerick were one from scarlet fever and one from diphtheria; one of the 3 deaths for Drogheda was from diphtheria, and the 6 deaths for Kilkenny included one from whooping-cough.

City of Dublin.—The number of births registered during the week was 197—98 boys and 99 girls, and the number of deaths 113—56 males and 57 females. Nineteen of the births and 13 of the deaths related to persons belonging to other localities.

The 100 deaths appertaining to the city are equivalent to a rate of 12.7 per 1,000 of the population.

Deaths from the principal epidemic diseases numbered 3, comprising one from scarlet fever, one from diphtheria, and one from diarrhoea and enteritis of a child under 2 years.

Tuberculous disease caused 14 deaths (13 of which were from pulmonary tuberculosis, and one from tuberculous meningitis).

Six deaths were caused by cancer and 19 by diseases of the heart.

There were 8 deaths from pneumonia, comprising 3 from broncho-pneumonia, 3 from lobar pneumonia and 2 from pneumonia—not otherwise defined.

One accidental death was registered.

Among deaths of infants under one year of age, one was due to epilepsy, one to convulsions, 2 to lobar-pneumonia, one to diarrhoea and enteritis, 2 to premature birth, one to injury at birth, and one to congenital debility.

Eighteen of the deaths recorded for the City during the week were those of children under 5 years, 12 being those of infants under one year, of whom 7 were under one month old, and 35 were those of persons aged 65 years and upwards, of whom 25 were aged 70 years or over.

Of the 100 deaths recorded, 46 occurred in hospitals and other public institutions.

Former Dublin Registration Area.—For the Dublin Registration Area which consisted of the former County Borough of Dublin and the former Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Dún Laoghaire, the aggregate births, deaths, and deaths from the principal epidemic diseases appertaining thereto, as registered during last week, were represented by annual rates of 21.6, 12.5, and 0.4, respectively. (See Table 1.) During the forty-three weeks ended Saturday last, the death rate from all causes averaged 14.3 and was 2.0 below the mean rate for the corresponding portions of the ten years, 1920–29.

Northern Ireland and Great Britain.—The mortality from all causes in Belfast County Borough during last week was equal to an average annual rate of 12.1 per 1,000 of the population, and for Londonderry 17.3.

In 107 large English towns (including London in which the rate was 9.9), the mortality among civilians was 10.0 per 1,000 of the estimated civil population.

The average death rate for 16 principal towns of Scotland was 12.3 per 1,000 persons living, the rate for Glasgow being 11.6 and for Edinburgh, 12.2.

* See note at foot of fourth page.

† The Local Government (Dublin) Act, constituting the City of Dublin and the Borough of Dún Laoghaire, came into force on the 14th October, 1930. The new City consists of the former County Borough of Dublin, the former Urban Districts of Pembroke and Rathmines and Rathgar, together with certain rural areas. The new Borough comprises the former Urban Districts of Blackrock, Dún Laoghaire, Dalkey, and Killiney and Ballybrack.

‡ Enteric fever, typhus, small pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE 1.—BIRTHS and DEATHS registered (a) during the week ended **Saturday, 25th October, 1930**, in relation to the **City of Dublin**, to each of the under-mentioned **Eleven Towns** and to BELFAST and LONDONDERRY COUNTY BOROUGHs: the Number of Deaths from some of the PRINCIPAL CAUSES and the Number of Uncertified Deaths, with the METEOROLOGY for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

Pneumonia ...	7	7	11	5	2	.	14

* Exclusive of 17 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—For the purposes of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities, but the figures shown for Dún Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2 and Limerick Rural, respectively, relating to residents of these Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths occurring in the Registrars' Districts of residents of the Boroughs above named are included, as in the case of births. In addition the deaths in Institutions situated in the twelve towns have been assigned to one or other of the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will appear in the Detailed Annual Report.

WEEKLY RETURN OF BIRTHS AND DEATHS

IN RELATION TO THE
TWELVE PRINCIPAL TOWNS OF SAORSTAT ÉIREANN.

By Authority of the Registrar-General.

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 5 NASSAU STREET, DUBLIN.

No. 44. VOL. LXVII.] WEEK ENDED SATURDAY, 1ST NOVEMBER, 1930. [PRICE 1½d. NET.

*Oifig an Ard Chláirathóra,
Baile Átha Cliath,
Aadh lá de mhí na Shamhain, 1930.*

PRINCIPAL TOWNS.

Particulars of the Births and Deaths* recorded for the **Twelve Principal Towns** as now constituted†, the estimated population of which in the middle of 1930 was 675,719, are given in Table I. Deaths from all causes recorded for these areas last week were equivalent to an annual rate of 13.5 per 1,000 of the population, the rate for the principal epidemic diseases‡ being 1.2. For the City of Dublin the rate from all causes was 14.5, for the Borough of Dún Laoghaire 14.7, for Cork County Borough 11.3, for Limerick 17.2, and for Waterford 21.5.

During the past four weeks the death rate for Cork was 13.1, for Limerick 17.5, and for Waterford 14.7.

Among the 17 deaths from all causes for Cork were 4 from diarrhoea and enteritis of children under 2 years, and the one death for Tralee was from enteric fever.

City of Dublin.—The number of births registered during the week was 167—75 boys and 92 girls, and the number of deaths 133—72 males and 61 females. Twenty-four of the births and 19 of the deaths related to persons belonging to other localities.

The 114 deaths appertaining to the city are equivalent to a rate of 14.5 per 1,000 of the population.

Deaths from the principal epidemic diseases numbered 9, comprising 2 from measles, 5 from diphtheria, and 2 from diarrhoea and enteritis of children under 2 years.

Tuberculous disease caused 16 deaths (13 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis and one from tuberculous peritonitis.)

Five deaths were caused by cancer and 15 by diseases of the heart.

There were 4 deaths from pneumonia, comprising 2 from broncho-pneumonia, and 2 from pneumonia—not otherwise defined.

Four accidental deaths were registered, one of which (that of a child aged 3 years) was due to burns, 2 to injuries caused by motor vehicles, and one by a horse-drawn lorry. There was also one death by suicide.

Among deaths of infants under one year of age, 2 were due to tuberculous meningitis, 3 to bronchitis, 2 to diarrhoea and enteritis, 2 to premature birth, 3 to injury at birth, 3 to congenital malformation, and 4 to congenital debility.

Thirty-one of the deaths recorded for the City during the week were those of children under 5 years, 23 being those of infants under one year, of whom 13 were under one month old, and 33 were those of persons aged 65 years and upwards, of whom 23 were aged 70 years or over.

Of the 114 deaths recorded, 58 occurred in hospitals and other public institutions.

Former Dublin Registration Area.—For the Dublin Registration Area, which consisted of the former County Borough of Dublin and the former Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Dún Laoghaire, the aggregate births, deaths, and deaths from the principal epidemic diseases appertaining thereto, as registered during last week, were represented by annual rates of 19.3, 14.5, and 1.1, respectively. (See Table I.) During the forty-four weeks ended Saturday last, the death rate from all causes averaged 14.3, and was 1.9 below the mean rate for the corresponding portions of the ten years, 1920–29.

Northern Ireland and Great Britain.—The mortality from all causes in Belfast County Borough during last week was equal to an average annual rate of 11.2 per 1,000 of the population, and for Londonderry 13.9.

In 107 large English towns (including London, in which the rate was 11.0), the mortality among civilians was 10.7 per 1,000 of the estimated civil population.

The average death rate for 16 principal towns of Scotland was 12.1 per 1,000 persons living, the rate for Glasgow being 12.6 and for Edinburgh, 13.1.

* See note at foot of fourth page.

† The Local Government (Dublin) Act, constituting the City of Dublin and the Borough of Dún Laoghaire, came into force on the 14th October, 1930. The new City consists of the former County Borough of Dublin, the former Urban Districts of Pembroke and Rathmines and Rathgar, together with certain rural areas. The new Borough comprises the former Urban Districts of Blackrock, Dún Laoghaire, Dalkey, and Killiney and Ballybrack.

‡ Enteric fever, typhus, small pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended **Saturday, 1st November, 1930**, in relation to the **City of Dublin**, to each of the under-mentioned **Eleven Towns** and to BELFAST and LONDONDERY COUNTY BOROUGHs: the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

Baile Átha Cliath,
11adh lá de mhí na Shamhain, 1930.*

PRINCIPAL TOWNS.

Particulars of the Births and Deaths* recorded for the **Twelve Principal Towns** as now constituted†, the estimated population of which in the middle of 1930 was 675,719, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 12.8 and 12.5; City of Dublin, 12.3 and 12.8; Borough of Dún Laoghaire, 14.7 and 11.8; Cork, 17.3 and 14.1; Limerick, 14.5 and 14.5; and Waterford, 17.6 and 15.2.

The deaths from the principal epidemic diseases,‡ recorded for the Twelve Town Districts last week, were equal to an annual rate of 0.8 per 1,000.

City of Dublin.—The number of births registered during the week was 201—104 boys and 97 girls, and the number of deaths 109—55 males and 54 females. Eighteen of the births and 12 of the deaths related to persons belonging to other localities.

The 97 deaths appertaining to the City are equivalent to a rate of 12.3 per 1,000 of the population, the rates in the three preceding weeks being 11.8, 12.7 and 14.5.

Deaths from the principal epidemic diseases numbered 7, comprising one from measles, 4 from diphtheria, and 2 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from measles were 0, 0 and 2; deaths from diphtheria were 0, one and 5; and deaths from diarrhoea and enteritis of children under 2 years were 3, one and 2.

Tuberculous disease caused 10 deaths (7 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis and one from general tuberculosis) as against 9, 14 and 16 from all forms of tuberculosis in the three weeks preceding.

Six deaths were caused by cancer, and 13 by diseases of the heart.

There were 10 deaths from pneumonia, comprising 4 from broncho-pneumonia, 3 from lobar pneumonia, and 3 from pneumonia—not otherwise defined.

Three accidental deaths were registered, one of which was due to drowning, and one was caused by a horsedrawn vehicle.

Among deaths of infants under one year of age, one was due to tuberculous meningitis, 3 to broncho-pneumonia, one to pneumonia, 2 to diarrhoea and enteritis, 4 to premature birth, one to congenital malformation, and 3 to congenital debility.

Twenty-three of the deaths recorded for the City during the week were those of children under 5 years, 16 being those of infants under one year, of whom 5 were under one month old, and 36 were those of persons aged 65 years and upwards, of whom 25 were aged 70 years or over.

Of the 97 deaths recorded, 43 occurred in hospitals and other public institutions.

Former Dublin Registration Area.—For the Dublin Registration Area, which consisted of the former County Borough of Dublin and the former Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Dún Laoghaire, the aggregate births, deaths, and deaths from the principal epidemic diseases appertaining thereto, as registered during last week, were represented by annual rates of 22.6, 12.6, and 0.9, respectively. (See Table I.) During the forty-five weeks ended Saturday last, the death rate from all causes averaged 14.3, and was 1.9 below the mean rate for the corresponding portions of the ten years, 1920–29.

Northern Ireland and Great Britain.—The mortality from all causes in Belfast County Borough during last week was equal to an average annual rate of 10.6 per 1,000 of the population, and for Londonderry 17.3.

In 107 large English towns (including London, in which the rate was 10.7), the mortality among civilians was 10.6 per 1,000 of the estimated civil population.

The average death rate for 16 principal towns of Scotland was 13.1 per 1,000 persons living, the rate for Glasgow being 13.1 and for Edinburgh, 11.8.

* See note at foot of fourth page.

† The Local Government (Dublin) Act, constituting the City of Dublin and the Borough of Dún Laoghaire, came into force on the 14th October, 1930. The new City consists of the former County Borough of Dublin, the former Urban Districts of Pembroke and Rathmines and Rathgar, together with certain rural areas. The new Borough comprises the former Urban Districts of Blackrock, Dún Laoghaire, Dalkey, and Killiney and Ballybrack.

‡ Enteric fever, typhus, small pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

L.—BIRTHS and DEATHS registered (a) during the week ended **Saturday, 8th November, 1930**, in relation to the **City of Dublin**, to each of the under-mentioned **Eleven Towns** and to **Belfast and Londonderry** (COUNTY BOROUGHs: the Number of Deaths from some of the PRINCIPAL CAUSES and the Number of Uncertified Deaths, with the Meteorology for the week; also particularising Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 15 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—For the purposes of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities, but the figures shown for Dún Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2 and Limerick Rural, respectively, relating to residents of these Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths occurring in the Registrars' Districts of residents of the Boroughs above named are included, as in the case of births. In addition the deaths in Institutions situated in the twelve towns have been assigned to one or other of the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will appear in the Detailed Annual Report.

THE GOVERNMENT PUBLICATIONS SALE OFFICE, 5 NASSAU STREET, DUBLIN.

No. 46, VOL. LXVII.]

WEEK ENDED SATURDAY, 15TH NOVEMBER, 1930.

[PRICE 1½d. NET.]

*Oifig an Ard Chláraitheora,
Baile Átha Cliath,
18adh lá de mhí na Samhna, 1930.*

PRINCIPAL TOWNS.

Particulars of the Births and Deaths* recorded for the **Twelve Principal Towns** as now constituted†, the estimated population of which in the middle of 1930 was 675,719, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population :—

Twelve Town Districts, 13.5 and 13.0 ; City of Dublin, 13.7 and 13.3 ; Borough of Dún Laoghaire, 13.3 and 12.5 ; Cork, 15.3 and 14.6 ; Limerick, 14.5 and 14.9 ; and Waterford, 13.7 and 14.7.

The deaths from the principal epidemic diseases‡ recorded for the Twelve Town Districts last week, were equal to an annual rate of 1.0 per 1,000. Among the 23 deaths from all causes for Cork was one from diphtheria ; 2 of the 7 deaths for Waterford were from diarrhoea and enteritis of children under 2 years, and the 2 deaths for Kilkenny included one from whooping cough.

City of Dublin.—The number of births registered during the week was 208—105 boys and 103 girls, and the number of deaths 122—58 males and 64 females. Twenty of the births and 14 of the deaths related to persons belonging to other localities.

The 108 deaths appertaining to the City are equivalent to a rate of 13.7 per 1,000 of the population, the rates in the three preceding weeks being 12.7, 14.5 and 12 3

Deaths from the principal epidemic diseases numbered 8, comprising 3 from diphtheria, and 5 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from diphtheria were one, 5 and 4 ; and deaths from diarrhoea and enteritis of children under 2 years were one, 2 and 2.

Tuberculous disease caused 15 deaths (12 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and one from general tuberculosis) as against 14, 16 and 10 from all forms of tuberculosis in the three weeks preceding.

Twelve deaths were caused by cancer, and 13 by diseases of the heart.

There were 9 deaths from pneumonia, comprising 2 from broncho-pneumonia, and 7 from pneumonia—not otherwise defined.

Two accidental deaths were registered, one of which was due to injuries caused by a motor vehicle.

Among deaths of infants under one year of age, one was due to bronchitis, one to broncho-pneumonia, one to pneumonia, 5 to diarrhoea and enteritis, 3 to premature birth, and one to injury at birth.

Eighteen of the deaths recorded for the City during the week were those of children under 5 years, 13 being those of infants under one year, of whom 5 were under one month old, and 27 were those of persons aged 65 years and upwards, of whom 18 were aged 70 years or over.

Of the 108 deaths recorded, 52 occurred in hospitals and other public institutions.

Former Dublin Registration Area.—For the Dublin Registration Area, which consisted of the former County Borough of Dublin and the former Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Dún Laoghaire, the aggregate births, deaths, and deaths from the principal epidemic diseases appertaining thereto, as registered during last week, were represented by annual rates of 23.4, 14.0, and 1.0, respectively. (See Table I.) During the forty-six weeks ended Saturday last, the death rate from all causes averaged 14.3, and was 1.9 below the mean rate for the corresponding portions of the ten years, 1920–29.

Northern Ireland and Great Britain.—The mortality from all causes in Belfast County Borough during last week was equal to an average annual rate of 10.6 per 1,000 of the population, and for Londonderry 6.9.

In 107 large English towns (including London, in which the rate was 11.3), the mortality among civilians was 11.1 per 1,000 of the estimated civil population.

The average death rate for 16 principal towns of Scotland was 13.4 per 1,000 persons living, the rate for Glasgow being 14.4 and for Edinburgh, 11.7.

* See note at foot of fourth page.

† The Local Government (Dublin) Act, constituting the City of Dublin and the Borough of Dún Laoghaire, came into force on the 14th October, 1930. The new City consists of the former County Borough of Dublin, the former Urban Districts of Pembroke and Rathmines and Rathgar, together with certain rural areas. The new Borough comprises the former Urban Districts of Blackrock, Dún Laoghaire, Dákey, and Killiney and Ballybrack.

‡ Enteric fever, typhus, small pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended **Saturday, 15th November, 1930**, in relation to the **City of Dublin**, to each of the under-mentioned **Eleven Towns** and to Belfast and Londonderry County Boroughs: the Number of Deaths from some of the PRINCIPAL CAUSES and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 17 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—For the purposes of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities, but the figures shown for Dún Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2 and Limerick Rural, respectively, relating to residents of these Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths occurring in the Registrars' Districts of residents of the Boroughs above named are included, as in the case of births. In addition the deaths in Institutions situated in the twelve towns have been assigned to one or other of the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will appear in the Detailed Annual Report.

Baile Átha Cliath,
25adh lá de mhí na Samhna, 1930.*

PRINCIPAL TOWNS.

Particulars of the Births and Deaths* recorded for the **Twelve Principal Towns** as now constituted†, the estimated population of which in the middle of 1930 was 675,719, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 13.3 and 13.2; City of Dublin, 14.3 and 13.7; Borough of Dún Laoghaire, 13.3 and 14.0; Cork, 10.6 and 13.6; Limerick, 9.3 and 13.9; and Waterford, 17.6 and 17.6.

The deaths from the principal epidemic diseases,‡ recorded for the Twelve Town Districts last week, were equal to an annual rate of 0.9 per 1,000. Among the 16 deaths from all causes for Cork were 3 from diphtheria, and 3 from diarrhoea and enteritis of children under 2 years.

City of Dublin.—The number of births registered during the week was 211—109 boys and 102 girls, and the number of deaths 136—78 males and 58 females. Eighteen of the births and 23 of the deaths related to persons belonging to other localities.

The 113 deaths appertaining to the City are equivalent to a rate of 14.3 per 1,000 of the population, the rates in the three preceding weeks being 14.5, 12.3 and 13.7.

Deaths from the principal epidemic diseases numbered 5, comprising 4 from measles, and one from diarrhoea and enteritis of a child under 2 years. In the three preceding weeks deaths from measles were 2, one and 0; and deaths from diarrhoea and enteritis of children under 2 years were 2, 2 and 5.

Tuberculous disease caused 11 deaths (9 of which were from pulmonary tuberculosis, and 2 from other forms of tuberculous disease) as against 16, 10 and 15 from all forms of tuberculosis in the three weeks preceding.

Nine deaths were caused by cancer, and 17 by diseases of the heart.

There were 10 deaths from pneumonia, comprising 6 from broncho-pneumonia, one from lobar-pneumonia, and 3 from pneumonia—not otherwise defined.

Three accidental deaths were registered, 2 of which were due to injuries caused by motor vehicles.

Among deaths of infants under one year of age, one was due to convulsions, 3 to bronchitis, 2 to broncho-pneumonia, one to pneumonia, one to premature birth, one to injury at birth, one to congenital malformation, and 3 to congenital debility.

Twenty-seven of the deaths recorded for the City during the week were those of children under 5 years, 17 being those of infants under one year, of whom 5 were under one month old, and 37 were those of persons aged 65 years and upwards, of whom 21 were aged 70 years or over.

Of the 113 deaths recorded, 52 occurred in hospitals and other public institutions.

Former Dublin Registration Area.—For the Dublin Registration Area, which consisted of the former County Borough of Dublin and the former Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Dún Laoghaire, the aggregate births, deaths, and deaths from the principal epidemic diseases appertaining thereto, as registered during last week, were represented by annual rates of 24.4, 14.4, and 0.6, respectively. (See Table I.) During the forty-seven weeks ended Saturday last, the death rate from all causes averaged 14.3, and was 1.9 below the mean rate for the corresponding portions of the ten years, 1920–29.

Northern Ireland and Great Britain.—The mortality from all causes in Belfast County Borough during last week was equal to an average annual rate of 12.3 per 1,000 of the population, and for Londonderry 8.1.

In 107 large English towns (including London, in which the rate was 11.4), the mortality among civilians was 11.9 per 1,000 of the estimated civil population.

The average death rate for 16 principal towns of Scotland was 14.1 per 1,000 persons living, the rate for Glasgow being 14.2 and for Edinburgh, 12.7.

* See note at foot of fourth page.

† The Local Government (Dublin) Act, constituting the City of Dublin and the Borough of Dún Laoghaire, came into force on the 14th October, 1930. The new City consists of the former County Borough of Dublin, the former Urban Districts of Rathmines and Rathgar, together with certain rural areas. The new Borough comprises the former Urban Districts of Blackrock, Dún Laoghaire, Dalkey, and Killiney and Ballybrack.

‡ Enteric fever, typhus, small pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended **Saturday, 22nd November, 1930**, in relation to the **City of Dublin**, to each of the under-mentioned **Eleven Towns** and to BELFAST and LONDONDERRY COUNTY BOROUGHs: the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 19 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—For the purposes of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities, but the figures shown for Dún Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2 and Limerick Rural, respectively, relating to residents of these Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths occurring in the Registrars' Districts of residents of the Boroughs above named are included, as in the case of births. In addition the deaths in Institutions situated in the twelve towns have been assigned to one or other of the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will appear in the Detailed Annual Report.

PRINCIPAL TOWNS.

Particulars of the Births and Deaths* recorded for the **Twelve Principal Towns** as now constituted†, the estimated population of which in the middle of 1930 was 675,719, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 13.7 and 13.3; City of Dublin, 13.1 and 13.4; Borough of Dún Laoghaire, 14.7 and 14.0; Cork, 19.9 and 15.8; Limerick, 10.6 and 12.2; and Waterford, 17.6 and 16.6.

The deaths from the principal epidemic diseases‡, recorded for the Twelve Town Districts last week, were equal to an annual rate of 1.3 per 1,000. Among the 30 deaths from all causes for Cork was one from diphtheria; and the 6 deaths for Tralee included one from whooping cough, and one from diarrhoea and enteritis of a child under 2 years.

City of Dublin.—The number of births registered during the week was 251—133 boys and 118 girls, and the number of deaths 115—51 males and 64 females. Twenty-two of the births and 12 of the deaths related to persons belonging to other localities.

The 103 deaths appertaining to the City are equivalent to a rate of 13.1 per 1,000 of the population, the rates in the three preceding weeks being 12.3, 13.7 and 14.3.

Deaths from the principal epidemic diseases numbered 13, comprising 9 from measles, one from diphtheria and 3 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from measles were one, 0 and 4; deaths from diphtheria were 4, 3 and 0; and deaths from diarrhoea and enteritis of children under 2 years were 2, 5 and one.

Tuberculous disease caused 9 deaths (8 of which were from pulmonary tuberculosis, and one from tuberculosis of the skin) as against 10, 15 and 11 from all forms of tuberculosis in the three weeks preceding.

Five deaths were caused by cancer, and 9 by diseases of the heart.

There were 12 deaths from pneumonia, comprising 7 from broncho-pneumonia, one from lobar-pneumonia, and 4 from pneumonia—not otherwise defined. Bronchitis caused 9 deaths.

Two accidental deaths were registered, one of which was due to injuries caused by a motor vehicle and one by a tram. There was also one death by suicide.

Among deaths of infants under one year of age, one was due to measles, 2 to convulsions, one to bronchitis, one to broncho-pneumonia, 2 to diarrhoea and enteritis, 3 to premature birth, one to congenital malformation, and one to congenital debility.

Twenty-seven of the deaths recorded for the City during the week were those of children under 5 years, 14 being those of infants under one year, of whom 5 were under one month old, and 27 were those of persons aged 65 years and upwards, of whom 22 were aged 70 years or over.

Of the 103 deaths recorded, 43 occurred in hospitals and other public institutions.

Former Dublin Registration Area.—For the Dublin Registration Area, which consisted of the former County Borough of Dublin and the former Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Dún Laoghaire, the aggregate births, deaths, and deaths from the principal epidemic diseases appertaining thereto, as registered during last week, were represented by annual rates of 28.0, 13.6, and 1.5, respectively (See Table I.). During the forty-eight weeks ended Saturday last, the death rate from all causes averaged 14.3, and was 1.9 below the mean rate for the corresponding portions of the ten years, 1920–29.

Northern Ireland and Great Britain.—The mortality from all causes for Belfast County Borough during last week was equal to an average annual rate of 12.1 per 1,000 of the population, and for Londonderry 12.7.

In 107 large English towns (including London, in which the rate was 11.6), the mortality among civilians was 11.9 per 1,000 of the estimated civil population.

The average death rate for 16 principal towns of Scotland was 14.6 per 1,000 persons living, the rate for Glasgow being 15.7 and for Edinburgh, 13.3.

* See note at foot of fourth page.

† The Local Government (Dublin) Act, constituting the City of Dublin and the Borough of Dún Laoghaire, came into force on the 14th October, 1930. The new City consists of the former County Borough of Dublin, the former Urban Districts of Pembroke and Rathmines and Rathgar, together with certain rural areas. The new Borough comprises the former Urban Districts of Blackrock, Dún Laoghaire, Dalkey, and Killiney and Ballybrack.

‡ Enteric fever, typhus, small pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE II.—Showing for the week ended **Saturday, 29th November, 1930**, the number of **DEATHS** of Residents of the several **REGISTERS**, Districts comprising the **City of Dublin**, and the **County Borough of Cork**,* the annual rate per 1,000 of the Population of the respective Districts represented thereby, and by the Deaths from the principal Epidemic Diseases †; with the mortality from some of the principal causes; also the Deaths at certain age-periods, and the number of Uncertified Deaths, the Deaths in Public Institutions being assigned to the Districts from which the deceased were admitted.

[illegible]

* See note at foot of fourth page.

+ The populations given for the Co. Borough of Cork and its component parts are those according to the Census for 1890.

+ See note (+) at foot of first page

PRINCIPAL TOWNS.

Particulars of the Births and Deaths* recorded for the **Twelve Principal Towns** as now constituted†, the estimated population of which in the middle of 1930 was 675,719, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 18.6 and 14.8; City of Dublin, 20.1 and 15.3; Borough of Dún Laoghaire, 14.7 and 14.0; Cork, 16.6 and 15.6; Limerick, 19.8 and 13.6; and Waterford, 23.5 and 18.1.

The deaths from the principal epidemic diseases‡, recorded for the Twelve Town Districts last week, were equal to an annual rate of 2.3 per 1,000. Among the 25 deaths from all causes for Cork was one from diphtheria; and the 8 deaths for Kilkenny included 3 from whooping cough, and one from diarrhoea and enteritis of a child under 2 years.

City of Dublin.—The number of births registered during the week was 192—97 boys and 95 girls, and the number of deaths 181—95 males and 86 females. Sixteen of the births and 23 of the deaths related to persons belonging to other localities.

The 158 deaths appertaining to the City are equivalent to a rate of 20.1 per 1,000 of the population, the rates in the three preceding weeks being 13.7, 14.3 and 13.1.

Deaths from the principal epidemic diseases numbered 23, comprising 14 from measles, one from scarlet fever, one from whooping-cough, 2 from diphtheria, and 5 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from measles were 0, 4 and 9, deaths from diphtheria were 3, 0, and one; and deaths from diarrhoea and enteritis of children under 2 years were 5, one and 3. There were no deaths from scarlet-fever or whooping-cough in the three previous weeks.

Tuberculous disease caused 22 deaths (17 of which were from pulmonary tuberculosis, 3 from tuberculous meningitis, and 2 from other forms of tuberculous disease) as against 15, 11 and 9 from all forms of tuberculosis in the three weeks preceding.

Eight deaths were caused by cancer, and 20 by diseases of the heart.

There were 24 deaths from pneumonia, comprising 16 from broncho-pneumonia, one from lobar-pneumonia, and 7 from pneumonia—not otherwise defined. Bronchitis caused 14 deaths.

Two accidental deaths were registered, one of which (that of a child aged 1 year six months) was due to burns, and one to injuries caused by a motor vehicle.

Among deaths of infants under one year of age, one was due to measles, one to whooping-cough, 2 to tuberculosis, one to convulsions, 2 to bronchitis, 5 to broncho-pneumonia, 2 to pneumonia, 5 to diarrhoea and enteritis, 4 to premature birth, and 4 to congenital debility.

Fifty-five of the deaths recorded for the City during the week were those of children under 5 years, 28 being those of infants under one year, of whom 7 were under one month old, and 35 were those of persons aged 65 years and upwards, of whom 23 were aged 70 years or over.

Of the 158 deaths recorded; 67 occurred in hospitals and other public institutions.

Former Dublin Registration Area.—For the Dublin Registration Area, which consisted of the former County Borough of Dublin and the former Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Dún Laoghaire, the aggregate births, deaths, and deaths from the principal epidemic diseases appertaining thereto, as registered during last week, were represented by annual rates of 21.8, 19.7, and 2.8, respectively (See Table I.). During the forty-nine weeks ended Saturday last, the death rate from all causes averaged 14.4, and was 1.8 below the mean rate for the corresponding portions of the ten years, 1920–29.

Northern Ireland and Great Britain.—The mortality from all causes for Belfast County Borough during last week was equal to an average annual rate of 15.3 per 1,000 of the population, and for Londonderry 25.4.

In 107 large English towns (including London, in which the rate was 11.5), the mortality among civilians was 12.0 per 1,000 of the estimated civil population.

The average death rate for 16 principal towns of Scotland was 15.4 per 1,000 persons living, the rate for Glasgow being 18.1 and for Edinburgh, 15.6.

* See note at foot of fourth page.

† The Local Government (Dublin) Act, constituting the City of Dublin and the Borough of Dún Laoghaire, came into force on the 14th October, 1930. The new City consists of the former County Borough of Dublin, the former Urban Districts of Pembroke and Rathmines and Rathgar, together with certain rural areas. The new Borough comprises the former Urban Districts of Blackrock, Dún Laoghaire, Dalkey, and Killiney and Ballybrack.

‡ Enteric fever, typhus, small pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

DEATHS

* See note at foot of fourth page.
† The populations given for the Co. Borough of Cork and its component parts are those according to the Census for 1926.

PRINCIPAL TOWNS.

Particulars of the Births and Deaths* recorded for the **Twelve Principal Towns** as now constituted†, the estimated population of which in the middle of 1930 was 675,719, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 19.5 and 16.3; City of Dublin, 21.3 and 17.2; Borough of Dun Laoghaire, 11.8 and 13.6; Cork, 14.6 and 15.4; Limerick, 22.5 and 15.6; and Waterford, 15.7 and 18.6.

The deaths from the principal epidemic diseases‡, recorded for the Twelve Town Districts last week, were equal to an annual rate of 1.7 per 1,000.

City of Dublin.—The number of births registered during the week was 154—77 boys and 77 girls, and the number of deaths 190—102 males and 88 females. Sixteen of the births and 22 of the deaths related to persons belonging to other localities.

The 168 deaths appertaining to the City are equivalent to a rate of 21.3 per 1,000 of the population, the rates in the three preceding weeks being 14.3, 13.1 and 20.1.

Deaths from the principal epidemic diseases numbered 21, comprising 11 from measles, 3 from whooping-cough, 3 from diphtheria, and 4 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from measles were 4, 9 and 14, deaths from whooping-cough were 0, 0 and one; deaths from diphtheria were 0, one, and 2; and deaths from diarrhoea and enteritis of children under 2 years were one, 3 and 5. One death from cerebro-spinal meningitis was registered.

Tuberculous disease caused 17 deaths (11 of which were from pulmonary tuberculosis, 3 from tuberculous meningitis, and 3 from other forms of tuberculous disease) as against 11, 9 and 22 from all forms of tuberculosis in the three weeks preceding.

Four deaths were caused by cancer, and 18 by diseases of the heart.

There were 38 deaths from pneumonia, comprising 30 from broncho-pneumonia, 2 from lobar-pneumonia, and 6 from pneumonia—not otherwise defined. Bronchitis caused 11 deaths.

Three accidental deaths were registered, 2 of which were due to injuries caused by motor vehicles.

Among deaths of infants under one year of age, 2 were due to measles, 3 to whooping-cough, one to diphtheria, one to meningitis, one to convulsions, one to bronchitis, 16 to broncho-pneumonia, 2 to pneumonia, 3 to diarrhoea and enteritis, 2 to premature birth, 3 to congenital malformation, and 4 to congenital debility.

Sixty-six of the deaths recorded for the City during the week were those of children under 5 years, 41 being those of infants under one year, of whom 8 were under one month old, and 33 were those of persons aged 65 years and upwards, of whom 23 were aged 70 years or over.

Of the 168 deaths recorded, 74 occurred in hospitals and other public institutions.

Former Dublin Registration Area.—For the Dublin Registration Area, which consisted of the former County Borough of Dublin and the former Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Dún Laoghaire, the aggregate births, deaths, and deaths from the principal epidemic diseases appertaining thereto, as registered during last week, were represented by annual rates of 17.9, 21.1, and 2.6, respectively (See Table I.). During the fifty weeks ended Saturday last, the death rate from all causes averaged 14.5, and was 1.7 below the mean rate for the corresponding portions of the ten years, 1920–29.

Northern Ireland and Great Britain.—The mortality from all causes for Belfast County Borough during last week was equal to an average annual rate of 16.5 per 1,000 of the population, and for Londonderry 13.9.

In 107 large English towns (including London, in which the rate was 12.8), the mortality among civilians was 12.9 per 1,000 of the estimated civil population.

The average death rate for 16 principal towns of Scotland was 15.3 per 1,000 persons living, the rate for Glasgow being 17.3 and for Edinburgh, 14.4.

* See note at foot of fourth page.

† The Local Government (Dublin) Act, constituting the City of Dublin and the Borough of Dún Laoghaire, came into force on the 14th October, 1930. The new City consists of the former County Borough of Dublin, the former Urban Districts of Pembroke and Rathmines and Rathgar, together with certain rural areas. The new Borough comprises the former Urban Districts of Blackrock, Dún Laoghaire, Dalkey, and Killiney and Ballybrack.

‡ Enteric fever, typhus, small pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended **Saturday, 13th December, 1930**, in relation to the **City of Dublin**, to each of the under-mentioned **Eleven Towns** and to BELFAST and LONDONDERRY COUNTY BOROUGH: the Number of Deaths from some of the PRINCIPAL CAUSES and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 21 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—For the purposes of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities, but the figures shown for Dún Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2 and Limerick Rural, respectively, relating to residents of these Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths occurring in the Registrars' Districts of residents of the Boroughs above named are included, as in the case of births. In addition the deaths in Institutions situated in the twelve towns have been assigned to one or other of the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will appear in the Detailed Annual Report.

Baile Átha Cliath,
23adh lá de mhí na Nodhlag, 1930.*

PRINCIPAL TOWNS.

Particulars of the Births and Deaths* recorded for the **Twelve Principal Towns** as now constituted†, the estimated population of which in the middle of 1930 was 675,719, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population :—

Twelve Town Districts, 18.4 and 17.6 ; City of Dublin, 22.1 and 19.2 ; Borough of Dún Laoghaire, 8.8 and 12.5 ; Cork, 12.0 and 15.8 ; Limerick, 11.9 and 16.2 ; and Waterford, 21.5 and 19.6.

The deaths from the principal epidemic diseases‡, recorded for the Twelve Town Districts last week, were equal to an annual rate of 2.1 per 1,000. Among the 18 deaths from all causes for Cork was one from diphtheria ; and the 4 deaths for Kilkenny included one from whooping-cough.

City of Dublin—The number of births registered during the week was 171—94 boys and 77 girls, and the number of deaths 187—97 males and 90 females. Fourteen of the births and 13 of the deaths related to persons belonging to other localities.

The 174 deaths appertaining to the City are equivalent to a rate of 22.1 per 1,000 of the population, the rates in the three preceding weeks being 13.1, 20.1 and 21.3.

Deaths from the principal epidemic diseases numbered 24, comprising 15 from measles, one from scarlet fever, one from whooping-cough, 3 from diphtheria, and 4 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from measles were, 9, 14 and 11, deaths from scarlet fever were 0, one and 0 ; deaths from whooping-cough were 0, one and 3 ; deaths from diphtheria were one, 2, and 3, and deaths from diarrhoea and enteritis of children under 2 years were 3, 5 and 4.

Tuberculous disease caused 12 deaths (9 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and one from spinal tuberculosis) as against 9, 22 and 17 from all forms of tuberculosis in the three weeks preceding.

Eight deaths were caused by cancer, and 22 by diseases of the heart.

There were 28 deaths from pneumonia, comprising 19 from broncho-pneumonia, 3 from lobar-pneumonia, and 6 from pneumonia—not otherwise defined. Bronchitis caused 16 deaths.

Three accidental deaths were registered, one of which was due to drowning, and one to injuries caused by a motor vehicle.

Among deaths of infants under one year of age, 2 were due to measles, one to meningitis, 3 to convulsions, 2 to bronchitis, 5 to broncho-pneumonia, one to pneumonia, 3 to diarrhoea and enteritis, 2 to premature birth, one to injury at birth, and 5 to congenital debility.

Sixty-two of the deaths recorded for the City during the week were those of children under 5 years, 27 being those of infants under one year, of whom 9 were under one month old, and 40 were those of persons aged 65 years and upwards, of whom 26 were aged 70 years or over.

Of the 174 deaths recorded, 76 occurred in hospitals and other public institutions.

Former Dublin Registration Area.—For the Dublin Registration Area, which consisted of the former County Borough of Dublin and the former Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Dún Laoghaire, the aggregate births, deaths, and deaths from the principal epidemic diseases appertaining thereto, as registered during last week, were represented by annual rates of 20.0, 21.6, and 3.1, respectively (See Table I.). During the fifty-one weeks ended Saturday last, the death rate from all causes averaged 14.7, and was 1.6 below the mean rate for the corresponding portions of the ten years, 1920–29.

Northern Ireland and Great Britain.—The mortality from all causes for Belfast County Borough during last week was equal to an average annual rate of 15.2 per 1,000 of the population, and for Londonderry 16.2.

In 107 large English towns (including London, in which the rate was 13.9), the mortality among civilians was 13.7 per 1,000 of the estimated civil population.

* See note at foot of fourth page.

† The Local Government (Dublin) Act, constituting the City of Dublin and the Borough of Dún Laoghaire, came into force on the 14th October, 1930. The new City consists of the former County Borough of Dublin, the former Urban District of Pembroke, and Rathmines and Rathgar, together with certain rural areas. The new Borough comprises the former Urban Districts of Blackrock, Dún Laoghaire, Dalkey, and Killiney and Ballybrack.

‡ Enteric fever, typhus, small pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended **Saturday, 20th December, 1930**, in relation to the **City of Dublin**, to each of the under-mentioned **Eleven Towns** and to BELFAST and LONDONDERRY COUNTY BOROUGHs: the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

* Exclusive of 23 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—For the purposes of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities, but the figures shown for Dún Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2 and Limerick Rural, respectively, relating to residents of these Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths occurring in the Registrars' Districts of residents of the Boroughs above named are included, as in the case of births. In addition the deaths in Institutions situated in the twelve towns have been assigned to one or other of the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will appear in the Detailed Annual Report.

WEEKLY RETURN OF BIRTHS AND DEATHS

IN RELATION TO THE
TWELVE PRINCIPAL TOWNS OF SAORSTAT FIREANN.

By Authority of the Registrar-General.

To be purchased through any Bookseller or directly from
THE GOVERNMENT PUBLICATIONS SALE OFFICE, 5 NASSAU STREET, DUBLIN.

No. 52. VOL. LXVII.] WEEK ENDED SATURDAY, 27TH DECEMBER, 1930. [PRICE 1½d. NET.

*Oifig an Árd Chláraitóra,
Baile Átha Cliath,
30adh lá de mhí na Nodhlag, 1930.*

PRINCIPAL TOWNS.

Particulars of the Births and Deaths* recorded for the **Twelve Principal Towns** as now constituted†, the estimated population of which in the middle of 1930 was 675,719, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 13.4 and 17.5; City of Dublin, 15.7 and 19.8; Borough of Dún Laoghaire, 13.3 and 12.2; Cork, 13.3 and 14.1; Limerick, 4.0 and 14.6; and Waterford, 5.9 and 16.7.

The deaths from the principal epidemic diseases‡, recorded for the Twelve Town Districts last week, were equal to an annual rate of 1.7 per 1,000. Two of the 20 deaths from all causes for Cork and one of the 3 deaths for Galway were from diphtheria.

City of Dublin.—The number of births registered during the week was 91—37 boys and 54 girls, and the number of deaths 134—66 males and 68 females. Eleven of the births and 10 of the deaths related to persons belonging to other localities.

The 124 deaths appertaining to the City are equivalent to a rate of 15.7 per 1,000 of the population, the rates in the three preceding weeks being 20.1, 21.3 and 22.1.

Deaths from the principal epidemic diseases numbered 18, comprising 12 from measles, 3 from diphtheria, and 3 from diarrhoea and enteritis of children under 2 years. In the three preceding weeks deaths from measles were, 14, 11 and 15; deaths from diphtheria were 2, 3 and 3, and deaths from diarrhoea and enteritis of children under 2 years were 5, 4 and 4.

Tuberculous disease caused 11 deaths (7 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and 2 from other forms of tuberculosis) as against 22, 17 and 12 from all forms of tuberculosis in the three weeks preceding.

Nine deaths were caused by cancer, and 11 by diseases of the heart.

There were 22 deaths from pneumonia, comprising 16 from broncho-pneumonia, and 6 from pneumonia—not otherwise defined. Bronchitis caused 14 deaths.

Six accidental deaths were registered, 2 of which were due to burns, one to injuries caused by a motor vehicle, and one by a tram.

Among deaths of infants under one year of age, 5 were due to measles, 2 to convulsions, 6 to broncho-pneumonia, 2 to pneumonia, 3 to diarrhoea and enteritis, one to premature birth, and 2 to congenital debility.

Forty-three of the deaths recorded for the City during the week were those of children under 5 years, 24 being those of infants under one year, of whom 6 were under one month old, and 29 were those of persons aged 65 years and upwards, of whom 20 were aged 70 years or over.

Of the 124 deaths recorded, 53 occurred in hospitals and other public institutions.

Former Dublin Registration Area.—For the Dublin Registration Area, which consisted of the former County Borough of Dublin and the former Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Dún Laoghaire, the aggregate births, deaths, and deaths from the principal epidemic diseases appertaining thereto, as registered during last week, were represented by annual rates of 10.8, 16.1, and 2.2, respectively (See Table I.). During the fifty-two weeks ended Saturday last, the death rate from all causes averaged 14.7, and was 1.6 below the mean rate for the corresponding portions of the ten years, 1920-29.

Northern Ireland and Great Britain.—The mortality from all causes for Belfast County Borough during last week was equal to an average annual rate of 16.3 per 1,000 of the population, and for Londonderry 9.2.

In 107 large English towns (including London, in which the rate was 13.9), the mortality among civilians was 12.8 per 1,000 of the estimated civil population.

The average death rate for 16 principal towns of Scotland was 15.5 per 1,000 persons living, the rate for Glasgow being 16.5 and for Edinburgh, 14.3.

* See note at foot of fourth page.

† The Local Government (Dublin) Act, constituting the City of Dublin and the Borough of Dún Laoghaire, came into force on the 14th October, 1930. The new City consists of the former County Borough of Dublin, the former Urban Districts of Pembroke, and Rathmines and Rathgar, together with certain rural areas. The new Borough comprises the former Urban Districts of Blackrock, Dún Laoghaire, Dalkey, and Killiney and Ballybrack.

‡ Enteric fever, typhus, small pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended **Saturday, 27th December, 1930**, in relation to the **City of Dublin**, to each of the under-mentioned **Eleven Towns** and to BELFAST and LONDONDERRY COUNTY BOROUGHs; the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

NOTE.—For the purposes of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities, but the figures shown for Dún Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2 and Limerick Rural, respectively, relating to residents of these Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths occurring in the Registrars' Districts of residents of the Boroughs above named are included, as in the case of births. In addition the deaths in Institutions situated in the twelve towns have been assigned to one or other of the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will appear in the Detailed Annual Report.

*Oifig an Ard Chláirathóra,
Baile Átha Cliath,
6adh lá de mhí Eanáir, 1931.*

PRINCIPAL TOWNS.

Particulars of the Births and Deaths* recorded for the **Twelve Principal Towns** as now constituted†, the estimated population of which in the middle of 1930 was 675,719, are given in Table I. The deaths from all causes appertaining to the undermentioned areas for last week and for the past four weeks, respectively, were equal to the following annual rates per 1,000 of the population:—

Twelve Town Districts, 22.8 and 18.5; City of Dublin, 23.2 and 20.6; Borough of Dún Laoghaire, 14.7 and 12.2; Cork, 33.2 and 18.3; Limerick, 23.8 and 15.6; and Waterford, 21.5 and 16.2.

The deaths from the principal epidemic diseases‡, recorded for the Twelve Town Districts last week, were equal to an annual rate of 2.8 per 1,000. Six of the 50 deaths from all causes for Cork were from diphtheria, and 2 of the 3 deaths recorded for Kilkenny were from whooping-cough.

City of Dublin.—The number of births registered during the week was 246—134 boys and 112 girls, and the number of deaths 201—114 males and 87 females. Twenty-six of the births and 18 of the deaths related to persons belonging to other localities.

The 183 deaths appertaining to the City are equivalent to a rate of 23.2 per 1,000 of the population, the rates in the three preceding weeks being 21.3, 22.1 and 15.7.

Deaths from the principal epidemic diseases numbered 25, comprising 20 from measles, one from whooping-cough, 3 from diphtheria, and one from diarrhoea and enteritis of a child under 2 years. In the three preceding weeks deaths from measles were 11, 15 and 12, deaths from whooping-cough were 3, 1 and 0, deaths from diphtheria were 3, 3 and 3, and deaths from diarrhoea and enteritis of children under 2 years were 4, 4 and 3.

Tuberculous disease caused 13 deaths (8 of which were from pulmonary tuberculosis, 2 from tuberculous meningitis, and 3 from other forms of tuberculosis) as against 17, 12 and 11 from all forms of tuberculosis in the three weeks preceding.

Six deaths were caused by cancer, and 15 by diseases of the heart.

There were 42 deaths from pneumonia, comprising 29 from broncho-pneumonia, and 3 from lobar-pneumonia, and 10 from pneumonia—not otherwise defined. Bronchitis caused 17 deaths.

One accidental death was registered, due to burns. There was also one case of suicide.

Among deaths of infants under one year of age, 4 were due to measles, one to meningitis, one to convulsions, 12 to broncho-pneumonia, 2 to pneumonia, one to diarrhoea and enteritis, 5 to premature birth, and 7 to congenital debility.

Seventy-eight of the deaths recorded for the City during the week were those of children under 5 years, 36 being those of infants under one year, of whom 12 were under one month old, and 36 were those of persons aged 65 years and upwards, of whom 24 were aged 70 years or over.

Of the 183 deaths recorded, 68 occurred in hospitals and other public institutions.

Former Dublin Registration Area.—For the Dublin Registration Area, which consisted of the former County Borough of Dublin and the former Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Dún Laoghaire, the aggregate births, deaths, and deaths from the principal epidemic diseases appertaining thereto, as registered during last week, were represented by annual rates of 27.6, 23.1 and 3.2, respectively (See Table I.). During the fifty-three weeks ended Saturday last, the death rate from all causes averaged 14.9, and was 1.4 below the mean rate for the ten years, 1920–29.

Northern Ireland and Great Britain.—The mortality from all causes for Belfast County Borough during last week was equal to an average annual rate of 17.1 per 1,000 of the population, and for Londonderry 20.8.

In 107 large English towns (including London, in which the rate was 16.0), the mortality among civilians was 14.8 per 1,000 of the estimated civil population.

The average death rate for 16 principal towns of Scotland was 16.1 per 1,000 persons living, the rate for Glasgow being 16.2 and for Edinburgh, 16.0.

* See note at foot of fourth page.

† The Local Government (Dublin) Act, constituting the City of Dublin and the Borough of Dún Laoghaire, came into force on the 14th October, 1930. The new City consists of the former County Borough of Dublin, the former Urban Districts of Pembroke, and Rathmines and Rathgar, together with certain rural areas. The new Borough comprises the former Urban Districts of Blackrock, Dún Laoghaire, Dalkey, and Killiney and Ballybrack.

‡ Enteric fever, typhus, small pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

TABLE I.—BIRTHS and DEATHS registered (a) during the week ended **Saturday, 3rd January, 1931**, in relation to the **City of Dublin**, to each of the under-mentioned **Eleven Towns** and to BELFAST and LONDONDERRY COUNTY BOROUGH: the Number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths, with the Meteorology for the week; also particulars regarding Births, Deaths and Meteorology for London, Edinburgh, and Glasgow.

(a) Including 2 cases of measles in former Urban District of Rathmines and Rathgar.

(b) Return not received.

TABLE IV.—Showing the number of **Cases of the undermentioned Diseases** treated in Dublin Hospitals during the week ended **Saturday, 3rd January, 1931**, with the number under treatment at the close of each of the last four weeks.

DISEASES	No. of Cases in Hospital at close of week ended			Week ended 3rd January, 1931.			
	Dec. 13	Dec. 20	Dec. 27	No. admitted	Discharged	Died	No. under treatment at close of week
Enteric Fever ...	7	6	5	.	1	.	4
Typhus
Small-pox
Measles ...	61	71	88	39	36	7	84
Scarlet Fever ...	98	90	86	13	20	1	78*
Diphtheria ...	70	66	65	26	7	3	81
Pneumonia ...	30	25	18	26	5	3	36

* Exclusive of 15 patients in "Beneavin," the Convalescent Home of Cork Street Fever Hospital.

NOTE.—For the purposes of the Weekly Returns, partial correction is made for births and deaths occurring in Institutions—in the case of births, by the exclusion of those taking place in each urban area belonging to other localities, but the figures shown for Dún Laoghaire Borough, Cork County Borough and Limerick County Borough include those occurring in Institutions situated in the Registrars' Districts of Bray No. 2, Cork Rural No. 1 and No. 2 and Limerick Rural, respectively, relating to residents of these Boroughs.

In the case of deaths, those not belonging to any of the twelve towns are excluded, and the deaths occurring in the Registrars' Districts of residents of the Boroughs above named are included, as in the case of births. In addition the deaths in Institutions situated in the twelve towns have been assigned to one or other of the town areas from which the deceased were admitted.

Full correction for births and deaths in Institutions embracing the whole of Saorstát Éireann will appear in the Detailed Annual Report.
